Of course, it will be understood that the Agents named in the *Guide* are not necessarily the only Agent at that port; however, demands on available space preclude the inclusion of other reputable Agency companies and we trust that other such companies will understand and appreciate the position. We have been obliged therefore to include details of one Agency company only, but by doing so we hope to have provided a further service to the user of the *Guide.*

ACKNOWLEDGEMENT

Our sincere thanks are due to the many hundreds of Port Authorities, Shipping Agents, Shipowners and Shipmasters who have so very kindly assisted us in the production of this Second Edition of *Guide to Port Entry*, and it is our earnest hope that this edition is worthy of all the help we have received.

We would also like to express our thanks to all those persons throughout the world who have written expressing appreciation of our endeavours. Such letters have been a constant source of encouragement in undertaking the volume of work involved.

This Second Edition contains substantially more detailed information than our 1971 publication, but nevertheless we are still very anxious to receive any comments or suggestions that may assist us to maintain constant improvement, for the future benefit of all users of the *Guide,* and any such corrections or additional information received will be printed in our six-monthly Supplements. In this regard, it will be understood that our intention is for this book to be of a thoroughly professional nature, and thus even the smallest of corrections or suggestions, particularly from the seafarer, would be most welcome.

I would like to say, once again, to all users of the *Guide* that I hope you will find it of value and a great help to you in your work.

APPROACHES: There are numerous good navigational aids visible from seawards to vessels approaching Arzew Bay. The oil storage tanks are visible for a considerable distance seawards, and the methane gas flare in the South-west corner of the bay is clearly visible at night. In addition to Isle de Arzew lighthouse, the mooring buoys are fitted with red winker lights, visible one mile, but too much reliance must not be placed on these last lights. The pillar buoys on the berths are fitted with blue winker lights. All these buoys form a good radar target and are clearly visible over 5 miles on radar screen.

PILOTAGE: Pilotage is compulsory. A Pilot from the pilotage station of Oran/Arzew will board vessels and assist Master to berth.

Communications from tankers will be via the international radio station at St. Lys, which is in telex communication with the Arzew terminal. Contact with the Arzew terminal can be made on VHF Channel 16. Vessel will then be informed by the control room of the frequency to use, either Channel 12 or 14 for mooring purposes.

Masters are advised to provide for safe access of port personnel an accommodation ladder rigged to end 10 ft. above the water, and a pilot ladder alongside to provide access to the accommodation ladder.

ANCHORAGE: Vessels requiring to anchor on arrival normally use services of the Pilot. Anchorage fees are charged whether the Pilot is used or not. Sea bottom of rocks, sand and mud.

RESTRICTIONS: Vessels may enter or sail by day or night. Tankers berthing on the sea line berths may be restricted by bad weather, heavy wind or swell.

TUGS: Four tugs available, from 900 h.p. to 1,600 h.p. Two tugs normally required for berthing and unberthing. The tow line should be supplied by the vessel. Tugs join inward bound vessels at about 1½ miles from harbour entrance.

HEALTH: Free pratique is not granted by radio. For tankers berthing on the sea line, pratique may be granted by a visiting sanitary officer or by the Pilot when he boards, providing the health declaration is satisfactory. For vessels berthing inside the harbour, the Health Officer will board on arrival.

Vessels calling at Arzew must give their ETA 48 and 24 hours prior arrival, naming the ports called within the last 10 days.

Crew must be vaccinated against cholera and smallpox. Vaccination books must be valid and a check is made before free pratique is granted.

RADIO: Oran Radio and Algiers Radio both listen on international frequencies. Tankers normally use St. Lys Radio.

Tankers over 80,000 tons deadweight must be capable of loading and deballasting at the same time. Minimum depth of water in the berthing area is 73 ft.

BERTHING: Use of ship's anchors will not be permitted when manoeuvring into berth. Two tugs are available to assist in berthing. On arrival vessels should have ready eight mooring lines, four forward and four aft and a tow rope at each end as it will be necessary to position the vessel with her own gear before securing to the heavy wires. Good rope messengers should be ready at each end of the vessel to pick up these wires.

There are three mooring buoys at the bow and three at the stern. All buoys are fitted with 5 in. wire ropes. Ships of moderate tonnage may be moored using two bow buoys and two quarter buoys only. Hoses will be lifted from both sides of the vessel using ships gear and crew.

The port and starboard derricks must be ready for use before berthing. The safe working-load must be at least 5 tons. The loading Master can refuse to berth a tanker whose lifting tackle is not correctly rigged or in good working condition.

Three 12 in. hoses are connected for loading, 2 on one side and one on the other. Loading rates up to 5,500 tph.

CABINDA: 05.22 S. 12.11 E.

DOCUMENTS:
7 Manifests for each port where cargo loaded for Cabinda, plus 1 copy of each Bill of Lading.
8 Lists of Passengers disembarking or in transit, even if nil.
7 Crew Lists.
8 Lists giving previous Ports of Call.
2 Lists of Crew Vaccinations.
3 Stores Lists.
3 Personal Effects Lists.
Other forms applicable to customs, health, etc., can be completed on arrival.

PILOTAGE: Services of a Government Pilot are compulsory. Radio ETA to Agents via Luanda Radio (or by cable from previous port) and anchor on arrival as near Cabinda as draft permits. Vessel is visited by port authorities and, if necessary, will be shifted, with Pilot, to alternative anchorage. If cargo for account of Cabinda Gulf Oil, vessel will almost certainly be moved nearer Malongo, where oil companies have special jetty for discharge of their dry cargo ex-lighters.
Tankers: The CABGOC Mooring Master will board incoming tankers 1–2 miles West of the berth to assist in mooring. Tug assistance is not required. Vessels moor in daylight only. Unmooring can be effected at any time.
Attention should be paid to the presence of oil wells and corresponding pipe-lines in the area; all platforms have lights which flash Morse "U". Approach to the berth must be made from the West.
Vessels are requested to have a pilot ladder properly rigged and lighted on the port side, well abaft of ships' manifold. On the forecastle will be required at least three good mooring lines, one pick-up wire ($\frac{3}{4}$ in. diameter) with a shackle on the eye and a suitable messenger rope.
ANCHORAGE: For vessels moving to Malongo, anchorage is restricted where Cabinda Gulf Oil are operating, roughly between 5° 15′ S. and 5° 30′ S. extending out to 12° 00′ E. Tankers should not anchor less than 2 miles West of single buoy mooring.
MAX. SIZE: Cargo vessels at anchorage for safe working off Cabinda 32 ft. draft. Vessels with deeper drafts can be accommodated further out but is always risk of swell hampering operations. For tankers Cabinda Gulf have buoyed terminal for tankers maximum 100,000 tons, maximum draft 50 ft.
PRATIQUE: Upon arrival, the appropriate Government Officials will board the vessel for prompt clearance so the preparation can begin for mooring.
In the event of arrival during night, clearance will not be effected until 0800 hours; however, a Custom Police Agent will be stationed aboard the vessel, which will allow preparation for daylight mooring to proceed.
RADIO: Luanda Radio. HF Radio telephone system is installed at Malongo Terminal and uses the call "MALONGO". Twenty-four hour watch is maintained on the international frequency of 2182 kHz.
For short range communications of approximately 50 miles, a VHF system is also installed in Malongo, which uses the same radio call ("MALONGO") and is also monitored 24 hours a day. Initial contact on this system should be made on 156·8 Mc/s. (Channel 16) then, by mutual agreement, the traffic should be passed on any of the following frequencies: 156·6 Mc/s. (Channel 12); 165·45 Mc/s. (Channel 9); 156·7 Mc/s. (Channel 14).
Masters are requested to advise CABGOC–CABINDA 72 and 24 hours in advance of estimated arrival time, giving vessel's name, date and expected hour of arrival, Master's name and any special requirements.
TUGS: None normally required. Cabinda Gulf have chartered a small tug to assist tankers berthing, if necessary.
STEVEDORES: Forty-eight hours advance notice, giving hatch distribution and nature of cargo, is recommended.
MEDICAL: Arrangements can be made for doctor to visit vessel on arrival. Hospital facilities available. Serious cases are taken to Luanda. Crew must be in possession of valid Smallpox and Yellow Fever Certificates.
SINGLE BUOY MOORING: A single point buoy mooring is located 8·7 miles West South West of the Cabinda Gulf Oil Company Terminal at Malongo. The position of the buoy mooring is approx. 5° 26′ S., and 12° 05′ E. The buoy is marked by a 5-mile white light flashing for 2 seconds and eclipsed for 18 seconds. Depth of water in the berth is 75 ft.
Mooring. Mooring gear will be passed from the terminal's line boat to the ship when Mooring Master boards the tanker. The first step in mooring procedure will be for vessels to lower one of the mooring lines out of the ship's bow, which will be made fast to the buoy's hooks by the line boat. Tanker to have 3 mooring lines ready on the bow. Mooring can only be effected in daytime from 0600 up to 1900 hours which is normally considered the latest time under favourable conditions of visibility.
Hose Handling. Two 12 in. hoses are connected to ship's manifold on the port side. Hose handling is to be effected by ship's crew under the direction of a ship's officer as instructed by the Mooring Master. The port boom should be rigged in readiness with a runner of minimum of $\frac{3}{4}$ in. diameter. Approx. weight of one hose is 3 tons.
Ballast. No facilities for reception of dirty ballast. Vessels must

arrive with clean ballast sufficient for safe manoeuvring. Deballasting operations will be constantly policed by representatives of CABGOC, and any evidence of pollution will be cause for refusal to permit continuing deballasting.

Cargo. "Cabinda Crude Oil" will have varying gravities ranging from 26·3 API to 34·6 API.

Some of this oil contains appreciable amounts of hydrogen sulfide, which can cause a toxic atmosphere during loading.

Loading. Cargo loading is by gravity, possibly assisted by booster pump, at a rate of approximately 30,000 Bbls. per hour.

About 30 minutes before the cargo is completed, the CABGOC Representative should be advised in order to co-ordinate the shutdown between the vessel and the terminal.

When the vessel has completed the cargo, loading line valves ashore and on the buoy will be closed; only then may the vessel's manifold valves be closed. (In an emergency, however, vessel may shutdown against loading.)

After completion of loading operations, the vessel will be ullaged and a comparison of ship–shore figures made. The ullages will be transmitted to the terminal by radio, and the report prepared and distributed.

The cargo papers will be delivered to the Master by the CABGOC Representative as promptly as possible.

Tankers may have to be "short despatched" to avoid delays on sailing.

There is no provision for off-take from ship. It is imperative that ship's Master declare the tonnage he requires prior to loading. Accurate meters ashore will ensure requested tonnage.

Tankers must have at least one set of mooring bitts on the port and starboard sides at the after end of the main deck and a minimum of four sets of mooring bitts on the poop deck to which mooring lines and/or wires can be hove tight and made fast. Self-tensioning winches will not be accepted in lieu.

Both bow anchors are required to have a minimum of ten shackles of chain. All anchors and chains are to comply with the requirements of a Classification Society recognised by the Australian Department of Shipping and Transport.

Tankers should have sufficient mooring ropes and/or wire so that single or doubled up, they have a total breaking strain of 80 tons to each of the six mooring buoys. Six such lines or combinations not less than 120 fms in length are required.

Permanent 5-in. circumference wires are fitted to No. 1, 2, 3, 4, and 6 mooring buoys. These wires are provided to supplement the tanker's own lines relative to the prevailing weather conditions at the time. These wires are fitted with 110/200 ft. of 3⅛in. wire and 4½in. ×100 ft. Terylene messengers. A good ship's rope messenger is required to bring the 4½in Terylene messenger to the tanker's winch drum.

HOSES: The tanker's derrick must be capable of lifting the 5-ton submarine hose on the starboard side.

The sea line delivering the oil is 20 in. OD × ⅜in. steel pipe with a 3 in. thick concrete external coating. The line is terminated with 200 ft. of flexible submarine loading hose consisting of 150 ft. of 16 in. and 50 ft. of 12 in. hose. The sea end of the 20 in. pipeline is marked with a white spar buoy, and the pick-up end of the flexible hose is marked with a white cone buoy.

The submarine line is left full of crude oil between tanker arrivals. After picking up and connecting the hose, the system will be pressurised to about 25 psi. After the hose has been hoisted and secured at the ship's rail, the blank flange on the end of the hose assembly is removed and the hose connected to the tanker's manifold by the deck hose and the adaptor spool assembly previously delivered to the tanker by the mooring launch.

The tanker should furnish necessary personnel to perform all work involved in the connecting and disconnecting of the cargo hose. During these operations a senior officer must be present to approve the hose connections and supervise the tanker's crew members in this work.

25 ft. × 10 in. and 18 ft. × 10 in. deck hoses and 14 in. to 12 in. and 12 in. to 10 in. reducers are available.

All flanges are U.S.A., Standard. An adaptor from 10 in. diameter U.S.A.S. (flange pitch circle diameter 14¼ in.) to 10 in. diameter British Standard (flange pitch circle diameter 15 in.) is available.

BALLAST: There are facilities for receiving ballast from vessels loading at Barrow Island. Tankers are required to arrive ballasted to at least one-quarter of their deadweight. Owing to the time factor involved in pumping dirty ballast ashore, it is recommended that tankers arrive with clean ballast and preferably deballast concurrently with loading. However, if required, ballast on arriving tankers may be pumped to shore using ship's pumps through the 20-in. submarine line then through a 12-in. deballasting line to the ballast receiving pond. The following deballasting procedure is used at the Terminal:

After the hose has been connected, at least one-third of the cargo must be loaded before deballasting. Part of this oil is to be used to displace ballast from the submarine line after all the ballast aboard the tanker is pumped to shore. The line displacement of the 20 in. loading line is approximately 12,250 barrels (1,650 tons).

It is necessary to load at least one-third of the cargo before deballasting operations begin in order to keep the ship in as heavy a condition as possible and thereby minimise the effects of sudden changes in sea and weather conditions.

When the preceding operation is complete, deballasting operations start. When the oil-water interface is detected onshore, the stream is diverted from the crude oil storage tanks to the ballast receiving pond. Pumping of the ballast continues until all ballast is discharged from the ship.

At this time, the Barrow Island crude oil previously loaded is pumped into the line in order to displace all ballast from the submarine pipe-line.

When the water–oil interface is detected ashore, the stream is then diverted to the shore tanks and the ship's pumps are requested to be stopped. During the displacement operations, pumping rates should be kept as high as possible to keep line contents in a turbulent condition in order to sweep the line as clean of water as possible.

LOADING: CAUTION – Whilst loading, the flow of oil from the shore pumping station via the submarine pipe-line is not to be shut off by closing ship's valves or the pipe-line valve without prior approval of the Mooring Master. At least one tank is to be fully open to the inflow of oil from the submarine pipe-line at all times, and in order to reduce back pressure as many tanks as possible should be open during loading. In all events, the back pressure at the ship's rail is not to exceed 100 psi.

The loading pumps are rated to deliver a maximum of 17,000 bbls. per hour of crude oil to tankers with a nominal pressure of 50 psig at the ship's side.

Barrow Island crude oil has an approximate API gravity range of 35·5 to 37·1 and an approximate temperature range of 74°F to 98°F.

The Mooring Master is to be advised when 200 tons is required to complete loading so that pump motors can be eased down slowly, and again at 50 tons when the pumps will be stopped and loading completed by gravity. On completion of loading, the manifold valve is to be closed slowly to minimise the surge of oil in the pipeline and the consequent quick build up of back pressure.

Portable radios are supplied for communication between tankers and the Terminal. To minimize the possibility of a dangerous position arising due to an undetected radio failure, tankers are required to keep an hourly test call schedule with the Terminal at which time they should advise the Terminal of the rail pressure.

It is more usual for vessels to approach from the Westward. In this case use may be made of either West or Causeway channels. Approaching from the Eastward is not recommended during the hours of darkness or in weather which is in any way restricting visibility.
ANCHORAGE: Vessels proceeding to anchorage should anchor in an East-North-Easterly direction from the Eastern extreme of the breakwater. Good holding is found in depths ranging from 14·5–27·5 metres. However, plenty of cable should be veered and at least six shackles is recommended. In the most boisterous conditions vessels have held well with from six to eight shackles out. However, the vessel should always be watched. A pilot ladder and not accommodation ladder is recommended for vessels at anchor due to the swell conditions which normally prevail at the anchorage.
BERTHING/RESTRICTIONS/MAX. SIZE: The port is divided into two areas, namely the Tanker Jetty and the Inner Harbour. There is a tidal range of 0·4–1·0 metres.

The Tanker Jetty is situated 1 mile North of the Inner Harbour and has a depth of 10·97 metres in the approaches and 9·6 metres alongside. The Jetty is exposed to the E.S.E. Vessels are berthed "head-in". Maximum mean draft must not exceed 9·14 metres; however, vessel may be trimmed by stern but must not exceed 9·75 metres aft. The maximum length of vessel permitted 171 metres.

The Inner Harbour consists of one land-backed berth of 244 metres (No. 1). A second berth of 213 metres in length adjoining the first is to the S.E. (No. 2). The depth in the approach channel, manoeuvring area and alongside is 11 metres. Maximum draft permitted is 10·4 metres and length overall 186 metres. On occasions it may be possible to exceed this draft but reference must be made to the Harbour Master before so doing, who may at his discretion permit an increase dependent on tide and prevailing weather conditions.

At all berths shore coir and/or nylon springs are used to supplement ships moorings.

Twenty-four-hour port but entry not generally carried out at night.
PRATIQUE: Vessels requiring "Free Pratique" are cleared between the hours of 6 a.m. and 10 p.m. daily.

GROOTE EYLANDT (Milner Bay) N. Territory: 13.59 S. 136.54 E.

DOCUMENTS:
3 Crew Lists.

1 Port of Call List.
3 Stores Lists.
1 Crew's Personal Effects List.
Derat. Certificate.
Clearance from last port.

PORT LIMITS: The waters in Milner Bay bounded by a line commencing at the HW mark on the N.W. coast of Groote Eylandt in position lat. 13° 50′ 05′ S. long. 136° 24′ 29′ E. and proceeding in a 260° 44′ 10″ direction to a point in lat. 13° 50′ 28″ S. long. 136° 22′ 3″ E. at the high-water mark on the East coast of Connexion Islet; thence by a line following the contour of the coast of Connexion Islet at the HW mark to "Boulder" in position lat. 13° 50′ 46″ S., long 136° 20′ 14″ E.; thence by a line bearing 151° 30′ to a position lat. 13° 53′ 34″ S. long. 136° 21′ 47″ E.; thence by a line bearing 80° 44′ 10″ to a point being lat. 13° 52′ 54″ S. long. 136° 25′ 58″ E. thence by a line following the contour of the coast at high-water mark to the point of commencement.

PILOTAGE: There is a Port Officer at Milner Bay who will assist Masters in berthing and departing from the jetty. Approaching Groote Eylandt from the Northwards, vessels should steer to a position 10 miles North of the North-east Islet, which is rocky on the Northern coast and rises to grassy hills. From the above position, steer to pass about 3 miles North of Chasm Islet until the recommended track on chart Aus. 14 is reached. This track 221° passes about 1 mile East of Brady Rock (light GP. FL. (3) ev. 12 seconds) and continues on this course until Hand Islet (FL. 5 secs.) bears 250° when the course should be altered to steer for Hand Islet on the recommended track (250°) until reaching the position to alter course to 195° to pass down the middle of Warwick Channel. It is recommended to remain on this course until reaching the patch south of Connexion Island.

If vessels enter via the Connexion passage, care must be taken to avoid the 3 fathom patch off N.W. Bluff and keep clear of the 27-foot patch about 3½ miles N.E. of Connexion Islet.

ANCHORAGE: Good holding ground is found ½ mile West of the jetty where there is a good sand bottom free of obstructions with about 40 ft. of water. Quarantine is granted at this anchorage.

MAX. SIZE: The maximum LOA is 640 ft. and max. breadth 95 ft. The maximum draft is 35 ft.

RADIO: The Groote Eylandt Mining Company has a radio-telephone through Darwin to all Australian centres, and a telex system through to Cairns.

The telephone number is Darwin 91–6589.

All telegrams should be addressed "HEMATITE, ALYANGULA NT".

PRATIQUE: Twenty-four hours before arrival at Milner Bay, vessel's Masters are requested to cable "QUARANTINE DARWIN" stating their last port of call, date sailed, number of crew and nationality, any sickness on board and whether all smallpox and cholera vaccinations are current and valid.

BERTHING: The ore-loading jetty is situated in approximately 13°65.5′S. 136°25′E., with a depth of water alongside of 35 ft. MLWOST with a tide range of 6 ft. A small tug is available to assist in berthing vessels and a launch is provided for running lines. The jetty consists of a central landing 324 ft. long and 36 ft. wide, with two breasting dolphins on the North and South ends of the central landing. A roadway extends from the shore to the central landing, virtually parallel to and on the North side of the loading conveyor belt. As there is no tidal information for this area, the tidal direction should be checked with the shore prior to berthing, as the tidal stream is sometimes different half a mile from the jetty.

The line of dolphins is offset 8° from the jetty stem which runs out 1,259 ft. from the shore in a 249° 45′ direction so that care must be exercised in placing the vessel for loading. All breasting dolphins are fendered with vertical timbering. When berthing, vessels should keep well clear of the loading head in the centre of the jetty, as it is possible that a vessel on a too fine approach could cause damage to the loading boom with the flare of the bow.

Vessels must have rat guards in position at all times (except while shifting ship), otherwise they will be liable to a fine. As Groote Eylandt is a reserve this requirement is rigidly enforced.

Loading rate is 1,200 tons per hour and the vessel is required to shift ship to load each hatch as the loading boom is fixed. Shore labour is available to shift lines, etc., as required.

FRESH WATER: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: 200 cigarettes, one bottle spirits, three bottles of beer per man.

MEDICAL: There is a hospital and medical staff available if necessary. Valid vaccination certificates are required, covering the requirements of the Australian Government Department of Health.

FIRE PRECAUTION: A permanent fire-fighting facility is installed on the ore-loading jetty. It is an automatic system which starts as soon as a fire hydrant is turned on, and delivers a 140 psi through a 2½-in. hydrant with a 5 TPI V Thread connection.

All shore hoses are 2½ in. and are equipped with fog nozzles. Foam equipment is also available on the jetty with an output of approximately 1,000 gallons per minute. Fire-fighting lines on the jetty deliver salt water only.

TIME: Time kept is Northern Territory "Standard Time" GMT plus 9 hr. 30 min.

HOLIDAYS: Cargo worked on most holidays by arrangement.

SHORE LEAVE: The area is a nature reserve and *no shore leave allowed to the crew.*

AUTHORITY/AGENT: The Groote Eylandt Mining Company Pty. Ltd. act as ships' Agents in all cases. Tel. address is: GEMCO Hematite Alyangula N.T.

Should a case of suspected quarantinable disease or a case of varicella in an adult or coloured person occur on board whilst at sea in Australian waters, Master required radio details to Commonwealth Director of Health for State in which next port situated and await instructions. Commonwealth Director of Health will decide according to circumstances whether inspect vessel outside Quarantine Line or permit it to proceed to berth and will advise Master.

(*e*) Should it come to notice in any particular case that Radio Pratique has been granted as a result of a wireless message sent in accordance with sub-paragraph (*a*) whereas in fact wireless message contains false information, matter will be investigated throughly and reported to the Director General of Health who will decide whether Radio Pratique will be denied in future to vessels on which Master and the Ship's Surgeon hold responsibility.

PORT KEMBLA, N.S.W.: 34.28 S. 150.54 E.

CERTIFICATES/DOCUMENTS/HEALTH/CUSTOMS ALLOWANCES/CARGO GEAR: See "Melbourne".

PILOTAGE: Pilotage is compulsory for all foreign vessels and Australian Masters without an exemption; this service operates 24 hours per day. When entering or leaving the Inner Harbour, the Pilot requires 3 ft. clearance under the keel. Pilots equipped with VHF.

The pilot boarding station is at the Wollongong Head Light House, bearing 310° – distance 1·25 miles from Harbour entrance.

RESTRICTIONS: An artificial harbour, formed by two breakwaters with an entrance of 1,000 ft. and a depth of 50 ft. ISLW at the entrance. Leading from the Outer Harbour there is an inner harbour basin, which is entered through a 370 ft. wide channel, having a depth of 36 ft. ISLW. The port consists of two harbours, locally referred to as the Outer Harbour and the Inner Harbour. In the Outer Harbour the swinging basin is approximately 1,500 ft. with a minimum depth of 35 ft., and in the Inner Harbour the swinging basin is approximately 1,200 ft. with a minimum depth of 36 ft. Major deepening has already commenced at the Inner Harbour. It is intended to deepen the entrance channel from the Outer Basin to the Inner Basin to 50 ft. and the Inner Harbour Discharge Berths to the same depth. The Coal Berth and the Multi-purpose Berth to be dredged to 43 ft. This work is anticipated to be completed by the end of 1975.

PRATIQUE: Quarantine service is available 24 hours per day

vessels 450 ft. or less in length are boarded for pratique at the Outer Harbour Anchorage in daylight hours only.

Vessels in excess of 450 ft. in length are granted pratique alongside the berth only.

As vessels over 450 ft. can only be granted pratique when alongside a berth, it is recommended, due to harbour congestion and/or prior arrived ships (therefore there being no berths available at this port), to arrange for vessels coming from the North to divert to Sydney Anchorage for pratique.

This allows vessels to tender Notice of Readiness on arrival off Port Kembla and establish turn for a particular berth.

RADIO: A continuously manned communication centre maintains constant contact with the Pilot, pilot tender, tugs and launches. In addition, a VHF radio-telephone system (operated by the Central Control Point in Sydney) provides communication for vessels at sea or under the control of a pilot.

Whilst anchored off the port of Port Kembla, it is necessary to maintain radio watches, as officially a vessel is at sea until entering the breakwaters into the port.

TUGS: At the present time three tugs are available, 24 hours per day, provided previous notification is given. Although their assistance is not compulsory, they are invariably requested by Pilots and Masters.

Two tugs have a bollard pull of 17·2 tons, one tug has a bollard pull of 25 tons.

Neck approach to jetty is 2,269 ft. long extending then to berths, one on each side of spring piling system on each side of jetty. Heavy coir moorings are used in conjunction with ship's moorings as a precaution against swell conditions.

Vessels berthed "head in" and extra mooring arrangements enable vessels of up to 475 ft. to be moored alongside, but with vessels in excess of 400 ft. in length, No. 1 hatch cannot be used, either for loading or discharging. Although minimum depth of 22 ft. of water in normal berth, at LWOST it shallows to shoreward and vessels over 400 ft. should only allow a depth of 18 ft. forward.

Vessels should only be berthed at slack water. Berthing signals are displayed from mast at end of jetty head.

Cape Lambert

Cape Lambert Service Jetty is owned by Cliffs Western Australian Mining Co. Pty. Limited. The neck is 1,500 ft. long and the berthing head is 510 ft. long. Off each end of the head is a mooring dolphin some 90 ft. away. This permits a vessel of about 600 ft. long to berth. There is a minimum depth of 30 ft. at LWOST. The height of the jetty, above LWOST, is 35 ft. Cargo is handled by ship's gear. The jetty is designed for road transport only.

Approach from East: Is a straight course after rounding Lady Julia Percy Island, 18 miles from the breakwater.
ANCHORAGE: Portland Bay is clear of all dangers and safe anchorage may be found ¼ to ½ mile North and North-east of the main breakwater and for smaller vessels between the lee breakwater and Whaler Reef Buoy (conical Bl. & W. checkered). Holding ground is good, and excellent shelter is obtained from Westerly weather. Anchoring is not recommended in strong Easterly or South-easterly weather, as there may be a confused sea and swell.

No. 1 Berth is suitable for bulk or general cargoes. It is also used for the discharge of diesel and fuel oil and for bunkering. It is a berth ideally suited for the assembly and handling of containers or unit loads as both road and rail transport can be utilised.

No. 2 Berth is a continuation of No. 1, and is also the grain loading berth with the silos situated at the South end of the wharf, and the loading gantry running along the roof of the shed. Two travelling ship-loaders operate over the length of the berth; when used simultaneously capacity is 200 t.p.h. each, used singly 400 t.p.h. The berth is also used for discharge of diesel and fuel oil, and as a bunker berth. The tank farm is approximately ½ mile distant.
BULK LOADING FACILITIES: Located at No. 1 and No. 2 berth K. S. Anderson Wharf. The loading units consist of two 90 ft. high lateral traversing ship-loaders, for the delivery of bulk grain (oats, wheat, barley, maize and sorghum).

The maximum distance of traverse is 450 ft. and with telescopic delivery spouts providing an additional 50 ft. at either end. Maximum permissible length of ship using loading units is 700 ft. to obviate shifting.

Maximum beam served to date 90 ft. in bulk carrier with wing tanks.

Maximum height above LW of ship's rail to swing spouts inboard 46 ft.

Gross handling rate per hour: oats 400, wheat 600, and barley 500 t.p.h. reduced when trimmers are used.

No. 6 berth is at right angles to K. S. Anderson berths and 450 ft. West. The berth is designed and built for the discharge of bulk cargoes but, as with No. 1 berth, is also used for the handling of general cargo.

It is 750 ft. in length with 36 ft. LW alongside and a clay bottom. Maximum draft is 34 ft. 6 in., with the same conditions as for No. 1 and No. 2 berths.
TANKERS: *Lee Breakwater and S. L. Patterson Oil Berth* protrudes in an Easterly direction from point 3·7 cables South of Whaler Point Lighthouse for a distance of 3,870 ft., with its extremity in 30 ft. of water.

The S. L. Patterson Oil Berth is situated on this breakwater about 1,500 ft. from the seaward end.

The wharf is 250 ft. in length and designed for vessels of up to 38,000 tons GRT. Depth alongside is 34 ft. low water, with limestone and sandy bottom.

Maximum draft permitted is 32½ feet.

The berthing and unberthing of tankers is *restricted to daylight hours* whether piloted or exempt.

The Shell Company of Australia Limited, and Ampol Petroleum (Victoria) Pty Limited have pipe-lines to the berth. Average discharge rate is approximately 300 t.p.h. This wharf can also be utilised as a loading berth ex-road transports, and as a fitting out or repair berth.

Service manned continuously on watch-keeping basis, each watch being under control of qualified Master Mariner, known as Port Operations Officer, who is responsible to Harbour Master.

Rules to be observed by shipping contained in Port Operations and Information Service Manual, and all shipping using port will be required to observe these rules.

TORRES STRAIT:

MAX. DRAFT: Maximum draft for vessels piloted through Torres Strait is 39 ft. (12 metres) subject to height of tide and keel clearance required by Pilots.

Gannet Passage and Prince of Wales Channel: These are the controlling areas for traversing Torres Strait and the whole of the Barrier Reef. Survey in April 1970 found depths of 31 ft. (9·5 metres) on the former recommended track between the buoys in their previous positions; in consequence, the recommended track was re-established by Australian Notice to Mariners 242/1970 with a least depth of 32 ft. (9·75 metres). The buoys were moved to new positions. (This could occur from time to time.) Most of the water along the recommended track from Gannet Passage to Twin Island through the Prince of Wales Channel is between 37 to 45 ft. (11·3 to 13·7 metres).

Mean HHW at Booby Island is 11·9 ft. (3·6 metres) and the Mean LLW is 3·1 ft. (0·925 metres). Mean HHW at Goods Island is 8·8 ft. (2·5 metres) and Mean LLW is 2·3 ft. (0·7 metres). HWS at Twin Island is 8·7 ft. (2·45 metres) and LWS is 1·3 ft. (0·35 metres). An automatic telemetric gauge has been established at Booby Island by Australian Notice to Mariners 138/1970 for the promulgation of the exact tide at Gannet Passage. Further tide gauges are to be erected at various positions in the Prince of Wales Channel.

KEEL CLEARANCE: The Queensland Coast and Torres Strait Pilot Service will pilot vessels through Torres Strait and the Inner Route with a minimum under-keel clearance at Gannet Passage of 3 ft. (1 metre), in the South-East season from 15th April to 14th December, inclusive, and with a minimum under-keel clearance o 5 ft. (1·5 metres) in the North-West season from 15th December to 14th April, inclusive. The maximum draft at no time is to exceed 39 ft. (12 metres), subject to review as circumstances alter. Masters of deep draft vessels are advised that reduction of speed may be necessary under certain circumstances.

PILOTAGE: Pilots can board or land either 1½ to 2 miles (2·4 to 3·2 kilometres) West of Gannet Passage buoys or 1½ to 2 miles (2·4 to 3·2 kilometres) West of Harrison Rock buoy as required by the Master. Masters of all vessels requiring Pilots are requested to advise giving ample notice to "TORRES" Sydney of their maximum draft, ETA and where bound, and specify which boarding station is required. Twelve hours before arrival Master should radio "STRAITS-PILOTS" Thursday Island confirming or adjusting this ETA. Pilot cutters based at Thursday Island are fitted with VHF Radio:

(*a*) Base Station – Call sign "THURSDAY ISLAND HARBOUR", will maintain listening watch on Channel 16 and operate on Channel 12.
(*b*) All ships traversing Torres Strait are requested to maintain continuous listening watch on Channel 16 between Carpentaria Light Vessel and Wyborn Reef or Bet Reef.
(*c*) Pilot launches will maintain watch on Channel 16 when on station.
(*d*) Owing to the limited manoeuvrability of the deep draft vessels in the narrow channels between the pilot's boarding and disembarkation stations and Gubbins Reef on the Inner Route and the pilot station and Bramble Cay, Great North East Channel. Shipmasters are requested, between these points, to switch on their VHF Channel 16 on sighting another vessel and leave it on until the vessel is past and clear.
(*e*) For the same above reason and also for pilots' boarding times etc., Shipmasters are requested to keep International Radio watch times from Carpentaria Light Vessel to Bramble Cay, Great North East Channel and between Carpentaria Light Vessel and Gubbins Reef in the Inner Route.

In addition to the above, Pilots for vessels proceeding from Eastward to Westward are available by arrangements with "TORRES" Sydney:

(*a*) For the Great North East Channel – off Port Moresby (Basilisk Passage).
(*b*) For the Grafton Passage – off Euston Reef beacon or Fitzroy Island.
(*c*) For the Inner Route or Queensland Ports – from Brisbane pilot cutter off Cartwright Point or off Gladstone Fairway Buoy.
(*d*) From any mainland port of New South Wales or Queensland.
(*e*) Other ports and/or places by arrangement with "TORRES" Sydney.

The Southern limits of the port includes all the intermediate coastline between the Eastern and Western limits as defined above.
PILOTAGE: Yampi Sound is not a compulsory pilotage area. However, the Company's Port Officer holds a foreign going Master's Certificate, is well versed in local conditions and will act as Pilot for Masters requiring his service. The Port Officer will board at the quarantine achorage.

As a Westerly wind is quite common, Masters are advised that their vessel should be adequately ballasted prior to berthing operations.
ANCHORAGE: Yampi Sound is a well sheltered deep water port with good all weather anchorages. The quarantine anchorage is located on the Southern side of Cockatoo Island and the Collins Cove

Bank with the red flashing beacon bearing 080° true by seven cables.
MAX. SIZE: *Cockatoo Island:* 55,000 dwt. have loaded.
Koolan Island: Up to 100,000 dwt.
HEALTH: Valid Vaccination Certificates required. Shipmasters will be advised of berthing and pratique arrangements either by VHF on Channel 16 or by telegram. A gangway is required at the quarantine anchorage to allow police, customs and doctor to board. A pilot ladder is not acceptable.
RADIO: The port is able to communicate with vessels which are fitted with VHF radio through the normal international maritime channels. The call sign is "KOOLAN ISLAND".

Vessels destined for Yampi are requested to send their ETA by radio on leaving previous port, and also 72 hours, 48 hours and 24 hours prior to arrival.
BERTHING: A work boat of 16 ton bollard pull and a line launch are available for berthing. Both are fitted with VHF.

Tidal streams set East with the flood and West with the ebb tide as a general rule. At Koolan Island jetty in Koolan Canal, tidal streams set Eastwards except for a period of about 3 hours from about ½ an hour before to 2½ hours after high water. Thus, tidal streams set Eastwards for about 18 hours a day and Westwards for only about 6 as the tide is semidiurnal.

At Cockatoo, tidal streams set Westwards for a period of about 6 hours, from 2 hours before high water to about 4 hours after high water, and Eastwards from 2 hours before low water to 4 hours after low water.
Cockatoo Island

Shiploading facilities at Cockatoo Island consists of a fixed head, retractable, luffing conveyor boom located at the centre of a "T" head dolphin jetty.

The jetty head consists of six dolphins aligned in a 117° T–297° T direction over a distance of 690 ft. and a further berthing dolphin is located 367 ft. and 272 ft. from the centre of each West and East end dolphin, respectively.

The Shiploader is positioned between the two centre dolphins and has a loading rate of 1,700 t.p.h.

Due to the fixed nature of the loader, Shipmasters are required to bring each hatch in sequence under the boom by warping the vessel alongside the jetty, and Company employees are in attendance for handling the shore end of mooring lines during the operation. The Shipmaster holds full responsibility for the warping operations at all times.

The dolphins are well constructed with a complete facing of timber fendering between the wharf decking and low water level offering maximum protection to ship sides.

Depth alongside is 42 ft. at MLWOST with a tide range of 35 ft.

Vessels of up to 55,000 tons dwt. with a length of 741 ft., beam 104 ft. and a draft 42 ft. have been loaded at this jetty.
Koolan Island

The loading berth at Koolan Island consists of substantial well fendered wharf 560 ft. long. Additional mooring dolphins are located each end to accommodate vessels of up to 100,000 dwt.

The depth of the water alongside the wharf is 52 ft. at MLWOST with a tide range of 35 ft.

The Shiploader consists of a travelling, retractable luffing, conveyor boom, capable of delivering 3,000 t.p.h. and moving a distance of 390 ft. along the wharf.

A 33 ton capacity crane is located on the Eastern end of the wharf for the discharge of general cargo if required.
STEVEDORES: Shore labour is available only for use as mooring gangs, loading and handling of cargo on the wharf only. There are no ship foremen.

AGENT: See "Sitra".

SITRA: 26 09 N. 50.40 E.

PORT LIMITS: A vessel is normally considered to be an "arrived vessel" when the vessel passes due North of Sitra Beacon, unless, in the case of large vessels, she has been instructed to anchor by company officials in the deep water South-East of No. 27 buoy.
OPERATORS: The Bahrain Petroleum Co. Ltd., Awali, Bahrain. Cables: "Bapco Bahrain".
DOCUMENTS: Crew list 3 copies. Passenger list 3 copies. Customs Declaration 2 copies. Health Declaration 2 copies. Log Book for Inspection by Customs Officers.
PILOTAGE: Not normally provided between Bahrain Light Vessel and Sitra Anchorage. For vessels navigating Sitra Deep Water Channel with drafts in excess 40 ft. Company will, upon request, arrange pilotage assistance where possible. Mooring Master boards vessel on arrival Sitra Beacon if berth available. If pilot does not approach vessel arriving, vessel should anchor in anchorage. Freighters will not be berthed until Agent has given pratique. Pilot boat, a tug or launch exhibiting International pilot flag by day and lights by night.
APPROACHES: Without accepting any responsibility, following suggestions made by Bapco marine staff, for Masters not familiar with approaches to Sitra. Courses inbound will depend upon draft. Vessels wishing utilise "Deep Water Departure Channel" should follow reciprocal of courses described for "Deep-water departure Channel". Vessels with drafts less than 30 ft. requested to *Keep Clear* of this channel, and use "Sitra Inward" buoy as follows.

(a) *Under 30 ft. Draft*

(i) From position (Lat. 26° 27.8′ N. Long. 51° 00′ E) 2½ miles S.E. of No. 3 Beacon (Lat. 26° 28.5′ N. Long. 50° 57.4′ E) course should be set to position ¾ mile North of "Sitra Inward" buoy (Lat. 26° 21.2′ N. Long. 50° 49.7′ E), leaving "Caisson Wreck" buoy (Lat. 26° 24.2′ N. Long. 50° 52.7′ E) at least ½ mile to starboard.

(ii) From position ¾ mile North of "Sitra Inward" buoy course should be set towards No. 16 buoy (Lat. 26° 12.9′ N. Long. 50° 46.3′ E).

(iii) When vessel has reached a position with No. 16 buoy, 1½ miles ahead, course can be adjusted to due South, passing westwards of "Vidal" buoy (Lat. 26° 14.1′ N. Long. 50° 47.2′ E) until "Sitra Beacon" bears due West. Course can then be altered to pass South of No. 18 buoy (Lat. 26° 10.3′ N. Long. 50° 43.9′ E), and thence to Sitra Anchorage, thus keeping clear of the deep water channel.

(iv) "Sitra Beacon" located at South end of North Shoals (see "Pilotage" and "Anchorage").

(b) *Deep-water departure Channel*

(i) Following "Alteration of Course" Positions, based upon radius of turn of 5 cables. This may necessitate an increase in Engine Revolutions, together with Full Helm, in some vessels.

(ii) The Company Mooring Master unberthing the vessel will normally leave vessel after having crossed Sitra Middle Ground Bar; and with the vessel proceeding to pass 2 cables South of "Sitra Beacon" (Fl. 6 sec.) and close North of No. 18 Buoy (Qk. Fl. R.).

(iii) When No. 18 Buoy comes abeam, course should be altered to 090° (T) which will bring Sitra Beacon dead astern, bearing 270° (T).

(iv) As No. 27 Buoy (Qk. Fl. W.) comes abeam to port, course should be altered to 022° (T), until buoys 21, 23 and 25 are sighted in line, bearing 344° (T), whence course should be altered to 344° (T).

(v) On course 344° (T) Buoy No. 25 (Fl. 5 sec.) and Buoy No. 23 (Int. Qk. Fl.) will be passed close on the port side and Buoy No. 16 (Fl. R. 6 sec.) a "Middle Ground Mark" on the starboard side.

(vi) As No. 21 Buoy (Gp. Fl. (3) 5 sec.) comes abeam to port, course should be altered to 015° (T), which should bring Buoy No. 12 dead ahead and Buoy No. 21 dead astern. The bearings of these buoys should be watched closely to gauge and correct for cross set which is sometimes quite strong on this course and the next. On this course No. 14 buoy (Fl. R. 10 sec.) will be left to starboard.

(vii) On No. 19 Buoy (Fl. 3 sec.) coming abeam, course should be altered to 002° (T) bringing Buoy No. 15 (Occ. 5 sec.) dead ahead. Buoy No. 12 (Fl. R. 2 sec.) will then be left close to starboard and No. 17 Buoy (Qk. Fl. W.) will be left to port.

(viii) In order to pass over a cable eastwards of Buoy No. 15, course should be altered to 016° (T) as Buoy No. 10 (Gp. Fl. (3) R. 10 sec.) comes abeam to starboard and then altered to 356° (T) as Buoy No. 15 comes abeam to port. This course would pass 3½ cables West of Bahrain Approach Beacon (Gp. Fl. (2) W. 10 sec.). It may be advisable to reduce engine revolutions shortly after steadying on course 356° (T), in order to be able to increase if required to provide better steerage on rounding the beacon.

(ix) When the Bahrain Approach Beacon bears 051° (T) course should then be altered to 051° (T). As this heading is approached, it should be found that Buoys No. 8 (Fl. R. 2 sec.) and No. 6 (Gp. Fl. (3) R. 6 sec.) are in line to starboard, as Bahrain Approach Beacon comes abeam at 2½ cables, and then should commence to open. Buoys No. 13 (Int. Qk. Fl.) and No. 11 (Qk. Fl.) are parallel to the course on the port side of the vessel, give clearance on the 43 ft. patches and give the extent of the bar which should be traversed at Slow Speed.

(x) On No. 11 Buoy coming abeam to port, course should be altered to 054° (T) passing between No. 9 Buoy (Fl. 10 sec.) and Buoy No. 4 (Qk. Fl. R.), followed by Buoy No. 7 (Fl. 5 sec.) to port.

(xi) When Buoy No. 2 (Gp. Fl. (2) R. 10 sec.) bears East, course should be altered to 071° (T) to pass close South of Buoy No. 5 (Fl. 3 secs.).

(xii) Buoy No. 5 should be close abeam to port, when the course is altered to 057° (T) and speed reduced to cross the spit which extends in a southerly direction from No. 3 Beacon (Fl. 6 sec.) in a minimum depth of 44 ft. at Chart Datum.

(xiii) When Buoy No. 1 (Fl. 1 sec.) bears 040° (T), course should be altered to 040° (T) bringing the Bahrain Light Vessel Gp. Fl. (3) 20 sec.) on the starboard bow. One and a half miles after Buoy No. 1 has been left to port, the minimum depth of water is greater than 50 ft., and it is safe to go Full Ahead.

(xiv) Masters can expect to have to make adjustments from time to time, to the recommended courses, due to set. Effects of tide and current should be watched for at all times.

ANCHORAGE: Within Port of Sitra vessels must anchor North of imaginary line between Sitra Beacon and Sitra middle ground outer buoy, order keep departure channel clear. Good holding ground in about 8 fathoms. Vessels *must not* obstruct fairway or approaches to wharves by anchoring South of above-mentioned imaginary line. Northern limit of anchorage marked by North Shoals Beacon on 5-fathom line. Due presence of pipes and power lines, anchoring or use of anchors prohibited in vicinity of or between No. 1 (Island) Wharf and No. 2 wharf except upon advice of Company Mooring Master.
RESTRICTIONS: Berthing carried out night and day. Merchant vessels carrying explosives not permitted entry Sitra Anchorage unless permission has been granted and anchorage allocated. Such vessels advised anchor in position 2 miles South-east of South Shoals Beacon.

The Deep Water Channel between Sitra Anchorage and Bahrain Lightvessel has minimum depth of 44 ft. below chart datum. This permits unrestricted use of channel for vessels drawing up to 40 ft. Drafts up to 44 ft. permitted by utilisation of tidal range over shoaler areas. Additional channel for drafts up to 30 ft. provided to South-east of main deep-water channel. The purpose of this channel is to keep main deep-water channels free for deep-drafted vessels.

Masters who intend to utilise deep-water Departure Channel with drafts in excess of 40 ft. are requested to advise port Captain, Sitra, not later than 48 hours in advance.

Masters of departing vessels requiring utilise rise of tide, to cross bar N.E. of Bahrain Approach Beacon, and that South of No. 3 Beacon, should be under way, passing Sitra Beacon not later than 3½ hours before next predicted *High Water Mina Sulman*, or at a time not later than that which would allow vessels to make the passage between Bahrain Approach Beacon and No. 3 Beacon at reduced speed of 8 knots, having full benefit of tide, and passing first Beacon 1½ hours before predicted *High Water Mina Sulman*.
MAX. SIZE: *Bapco Terminal:* Vessels up to 40 ft. draft, under normal circumstances, or up to a maximum of 44 ft. draft, making use of the tide.
Alba Marine Facilities: Up to 35,000 tons dwt., up to 35 ft. draft.
HEALTH: Bahrain Port Health Regulations based on International Sanitary Regulations adopted by World Health Organisation May 1951. Quarantine signals must be prominently displayed approaching Sitra. Pratique normally granted by Bahrain Government Port Health Officer or Agents' representatives. If neither available, Company Mooring Master also authorised grant Pratique to healthy tankers scheduled for immediate berthing.
RADIO: All radio communications routed through "Cable & Wireless", Manama Bahrain. Cable address "Bapcoship Bahrain" through Bahrain Radio Station Call Sign "GNV". Vessels requested keep "Bapcoship Bahrain" fully advised estimated times of arrival and provide "Bapcoship Bahrain" with ETA, arrival draft and draft to which vessel loading, not later than 48 hours steaming time from Sitra. Times should be quoted and shown as being GMT.

OIL WHARVES: *No. 1 (Island) Wharf:* No. 1 (Island) Wharf consists of one main central platform supported on steel piles with four inter-connected mooring dolphins, two positioned to the North-west, and two to the South-east; giving the wharf an overall length of 923 ft. This wharf, which is supplied by submarine pipe-lines, provides two berths protected by berthing beams.

Depths at this wharf are as follows:
Berth No. 5; 46 ft. at Mean Low Water (14·00 m.)
Berth No. 6; 46 ft. at Mean Low Water (14·00 m.)

No. 2 Wharf: No. 2 Wharf is a pile driven "T" head structure with three inter-connected dolphins, two mooring dolphins, positioned to the North-west, and a warping dolphin positioned to the South-east, giving the wharf an overall length of 1,666½ ft. and provides four berths, two on the outside and two on the inside. Both outside berths No. 1 and 2. and the North-west inner berth No. 3, are protected by berthing beams. This wharf is connected to the mainland by a causeway, 3 miles in length.

Depths at this Wharf are as follows:
Berth No. 1; 44 ft. at Mean Low Water (13·400 m.)
Berth No. 2; 44 ft. at Mean Low Water (13·400 m.)
Berth No. 3; 39 ft. at Mean Low Water (11·900 m.)
Berth No. 4; 41 ft. at Mean Low Water (12·500 m.)

There are length limitations as follows:
Berths 1 and 2 normally 820 ft., but may be exceeded depending upon the configuration of the vessel, and the vessel utilising the other berth.
Berth No. 3; 560 ft. (170m.)
Berth No. 4; 550 ft. (167 m.)
Berths 5 and 6 normally 900 ft., but may be exceeded depending upon the configuration of the vessel.

Coastal Tanker Wharf: This wharf which lies 023° to 203° is limited to vessels of under 240 ft. in length and less than 16 ft. (4·90 m.) draft. The wharf is a pile driven structure connected by a catwalk to the causeway.

BALLAST: The discharge of dirty ballast within the territorial waters of Bahrain is strictly prohibited. As a further measure to avoid pollution from oil within central regions, tanker masters are requested not to clean tanks and lines, and not to pump dirty ballast overboard within 100 miles of the Bahrain coast.

There are only limited facilities for receipt of oily residues at Sitra Wharves. Vessels which required to discharge ballast at Sitra Wharves must, therefore, ensure that the ballast is clean, and can be pumped overboard without question.

Any vessel within Bahrain Territorial Waters and having on board dirty ballast which is necessary to discharge before loading, will be required to proceed to sea for discharge and subsequent reballasting before being permitted to berth.

BERTHING: Vessels required be sufficiently ballasted with clean ballast water before coming alongside. Minimum tanker drafts normally acceptable are:

16,000 DWT to 20,000 DWT 12′F 20′A
20,000 DWT to 30,000 DWT 14′F 22′A
30,000 DWT to 40,000 DWT 15′F 24′A
40,000 DWT to 50,000 DWT 16′F 25′A
50,000 DWT to 60,000 DWT 19′F 26′A
60,000 DWT to 70,000 DWT 21′F 27′A
70,000 DWT to 90,000 DWT 23′F 28′A
Over 90,000 DWT 25′F 29′A

Mooring Masters may decline berth vessels if not sufficiently ballasted. Berthing operations conducted on 24-hour basis at discretion of Mooring Master; wind, weather, tide and other circumstances permitting. Mooring Masters will decline berth vessels if not properly equipped with satisfactory mooring lines, or if deck appliances inoperable, or if steering gear, telegraphs and whistles not in an efficient condition. Anchors and cables should be cleared ready for letting go. Master should notify Mooring Master of any defects or peculiarities pertaining to vessel. Masters requested maintain continuous watch on VHF for berthing instructions. Vessels must be equipped with *at least* five lines forward and four lines aft. These lines must be sufficient length enable moorings to be "doubled up" in bad weather. Method of mooring at discretion of Mooring Master.

ALBA MARINE FACILITIES: The Alba Marine facilities consist of an artificial island built in shallow water, approx. 2¾ miles off the coast of Sitra Island, and a jetty in deep water, which is connected to the island by a roadway 560 ft. long, above which runs a conveyor which carries raw materials from the jetty to the coke and alumina store situated on the island. The jetty is 562 ft. long and 47 ft. wide. The seaward berth, depth 35 ft., provided with berthing heads, to accept vessels up to 35,000 dwt. The landward berth is provided with fendering to accept vessels up to 12,000 dwt. Mooring dolphins at each end of the jetty.

Loading and Unloading Facilities: Bulk carriers unloaded at seaward berth by two 10-ton capacity grab cranes. Metal exports loaded at landward berth, using ship's gear, or possibly at seaward berth when the jetty cranes may be used.

Services: Vessels using Alba Marine facilities are assisted by Bahrain Petroleum Company Limited Mooring Masters and tugs. Only transportation between the Alba jetty and mainland is by launch which must be provided by Agents. No fresh water available at Alba jetty.

Operators: Company cable address is "Metalba Bahrain".

TUGS: Tugs normally join in Sitra Anchorage after pilot has boarded. Tugs lines used during berthing operations. During unberthing ship's lines used for forward tug, and tug's line for after tug. Mooring Master will decide number of tugs.

MEDICAL: Advance notice to Agents preferable. Good hospital and medical facilities.

RESIDUES: Limited slop tank facilities for oily residues at all berths.

DENSITY: Average 1,030 oz. cu. ft.

FRESH WATER: Limited quantities of well-water available at Sitra Wharves. Is saline and mainly used for washing purposes, although can be used for drinking. Delivery rate about 15 tons per hour. Nominal delivery charge. Vessels berthed for water only in emergency and additional docking charge. Water by lighter available Sitra Anchorage by arrangement with Agents.

CHALNA (Khulna): 22.35 N. 89.32 E.

DOCUMENTS: See "Chittagong".

PILOTAGE: Compulsory. Master should in addition to usual ETA to Agents keep in touch with pilot vessels stationed at Hiran Point

about 45 miles from the base calling AQFA or AQFI, depending on which vessel is stationed at the time. Pilot vessels are equipped with radio and maintain regular watches on 500 metres from 0600 to 0800. 1000 to 1200, 1400 to 1600 and 1800 to 2000 local time. If a message is not being picked up, by Khulna Radio call sign ASV it should be relayed through Chittagong Radio or the pilot vessel.

Ships over 17 ft. draft are usually piloted on the flood to cross the bar and the pilot vessel, which has been in contact with the incoming ship leaves from Hiran Point, in time to coincide with the arrival of the vessels at the pilotage ground, situated about 7 miles North-west of Fairway "Lighted" buoy where ships can anchor in 9 fathoms of water. The channel from Fairway up to the Anchorage has been marked with lighted buoys and pilotage is done in daylight.

In rough weather and especially during the monsoon, ships are led into calm waters by the pilot vessel, which maintains close radio contact, and Pilots board inside the river.

ANCHORAGE: Chalna port consists of a sheltered deep-water anchorage at Mangla on Pussur River.

Depth of water 19 ft. to 45 ft. at LLWD. Distance from sea 64 miles.

RESTRICTIONS: Entrance to the Pussur river is about 6 miles wide at the mouth and has a bar over about 5 miles where the depth is 3 fathoms.

MAX. SIZE: Ships drawing up to 23 ft. can cross the bar in all seasons. In S.W. monsoons vessels up to 24 ft. 5 in. can be accommodated on spring tide.

HEALTH: On arrival at the mouth of the Pussur River, vessels are required to wireless "Quarantine" Khulna, giving health report, to avoid difficulties with Port Health Authorities.

TUGS: Two powerful tugs available to assist in emergency. Not required for berthing.

BERTHING: Fifteen swinging moorings and unlimited anchor berths. No jetty or wharves available in the harbour.

DENSITY: The density of water at the Outer Bar varies from 1.005 to 1.025 and at Mangla from 1.002 to 1.020.

FRESH WATER: Available by barges.

BUNKERS: Coal and fuel oil can be arranged in emergency cases. Usually 5 days notice required.

WATCHMEN: On orders from the Master, the stevedores will arrange to supply watchmen by day and night.

CARGO GEAR: All loading and discharging is performed by ship's derricks.

HOLIDAYS: Eid-ul-Azha (27th/28th February); Muharram (29th March); Eid e Miland un Nabi (29th May); Independence Day (14th August); Defence Day (6th September); Death of Quaid-e-Azam (11th September); Revolution Day (27th October); Jamat-ul-Wida (5th December); Eid-ul-Fitr (11th/12th December); Christmas Day (25th December).

DEVELOPMENT: East Bank of the Pussur River in the present harbour area has been selected for constructing a permanent port. First phase of the permanent port scheme would provide 8 general cargo berths, one foodgrain terminal, and one bulk cargo terminal with transit sheds, warehouses and cargo handling equipment, and also an oil terminal and one repair berth with slipway and workshop. Work on this project has already been started and it is expected to be completed by 1973.

GENERAL: Since there is no shore accommodation available at the Anchorage a Customs Officer and two Licensed Measurers have to be accommodated on board. Also a cabin or covered deck space has to be provided for the members of the stevedore company's staff.

AUTHORITY: Port Director, Port of Chalna, PO Town Khalishpur, Khulna, Bangladesh.

AGENT: See "Chittagong".

PILOTAGE: Pilotage is compulsory. Pilots board and leave vessels at the outer anchorage.

Inward ships must present themselves at Fairway Buoy at least three hours before high water to enter on a particular day.

Masters should send following information to Port Khulna, via Khulna Radio, call sign ASD and to duty pilot vessel call sign AQUI and pilot station, call sign ASDI, 24 hr. prior to arrival at Khulna Fairway Buoy:

(*a*) ETA Pussur Fairway Buoy.
(*b*) Fresh-water draft.
(*c*) Speed available.
(*d*) Vessel's length.
(*e*) Vessel's gross tonnage.
(*f*) Fresh-water requirements.

Ships are to follow strictly the instructions given by Pilot while crossing the outer bar and anchor two miles S.E. of Hiron Point and wait for the Pilot. The time of crossing the outer bar is given by the pilot vessel or pilot station under instructions from the Pilot.

ANCHORAGE: The Anchorage is considered safe and the holding ground is good. The bed of the river is soft mud and is harmless in case of grounding.

RESTRICTIONS: Though a river port, Chittagong is a tidal harbour, and presently ships enter and leave only on the day tides, therefore, ships should endeavour to arrive at least three hours before high water of the day's tide. The channel width for navigation is 800 ft. at its narrowest point. There are no signals or markers for night navigation.

During Spring tides vessels under 7 knots will not be handled. Vessels over 10 knots having efficient steering and bridge control, can be brought in with 9/12 in. more than the predicted draft for the day.

Vessels with a speed of over 10 knots but less than 500 ft. length overall and fitted with VHF radio telephone are entitled to an additional draft of 4 in.

MAX. SIZE: Anticipated safe drafts are predicted three months in advance. The depth of water over the Outer, Inner and Gupta Bars is maintained at 12 ft. at low water throughout the year. The bars are situated at distances of half, one and 4-3/4 miles from the entrance. In order to calculate the draft for entering and leaving port, the depth of 12 ft. over the bars is added to the height of water in the tide tables for day tides. Tankers: see below.

HEALTH: All vessels must send the standard quarantine messages by radio. Vessels which have touched ports between Port Sudan and Durban, on the East Coast of Africa including these two ports, or any other yellow fever port or other port on the continent of Africa, or ports which are declared from time to time as quarantine areas, are suspected vessels on account of yellow fever or jigger, or other infectious disease as the case may be and may not have communication with the shore till declared by the Port Health Officer, who attends only between sunrise and sunset, except in special circumstances. The incubation period for yellow fever is 9 days, but vessels arriving later than 9 days are still not free from quarantine because there is no incubation period for jigger.

RADIO: In addition to Khulna Radio (ASD), harbour control station (AQDC) and pilot station (ASVI) maintain 24 hours' WT watch on 500 kHz and RT watch on 2182 kHz. VHF Channel 12. Pilot vessels AQEI or AQSA keep an operator on watch on 500 kHz.

Radio beacon at Hiron Point is operating continuously from 1630 to 2359 GMT and in case of poor visibility will continue until it clears. QTG service available on request to ASVI and in special cases beacon service can be made available on request.

TUGS: Available, under direction of Pilot.

BERTHING: Thirteen berths of varying lengths having a continuous jetty face of 7,000 ft. Twelve berths are equipped with cranes and all are rail served. In addition, there are two pontoon jetties, and two light jetties without cranes and rail tracks. These are suitable for 500 ft. vessels.

There are 8 mooring berths, of which 2 have pontoons for supporting pipe lines. The largest can take a 500 ft. vessel.

TANKERS: Crude oil tankers up to a draft of 34 ft. can be handled at off-shore oil terminal. A special pilot is required to place the tanker alongside the buoy.

Clean tankers enter the river and berth at petroleum jetties inside the port, restricted to length of 550 ft. overall, and subject to published river draft.

Tankers up to 60,000 dwt. discharge into lighters at Kutubidia anchorage where depth is 20 metres.

FRESH WATER: Available from quays.

FUEL: All grades available at oil berths. Otherwise supplied by barge.

REPAIRS: Facilities for repairs available. No dry docks. Ships' engines may not be dismantled or immobilised whilst at berths or moorings without the prior sanction of the port Authority.

ANGRA DOS REIS: 23.01 S. 44.18 W.

DOCUMENTS: See "Rio de Janeiro".
PILOTAGE: When requested by the Agents, a pilot launch meets incoming ships off the automatic lighthouses of Itacuatiba and the Lage Branca, depending on whether the ships approach from the East or West, respectively.
ANCHORAGES: In the Bay of Ilha Grande; approximately midway between the ports of Rio de Janeiro and Santos; offering excellent anchorages, amongst which may be mentioned: Enseada das Estrêlas, Enseada do Abraão, Enseada das Palmas, Enseada Sitio Forte, and Enseada de Araçatiba.
RESTRICTIONS: The Bay of Ilha Grande possesses two entrances, from the East and the West, permitting immediate access to the Port of Angra dos Reis from the direction of Rio de Janeiro or the Port of Santos, without any change of course. Both access channels are adequately marked, enabling ships of up to 14 metres draft to navigate in complete safety as far as the port basin about one mile from the wharf, where they may lie at anchor and take on cargo from tenders tied up alongside. There is another basin with a mud bottom even nearer the wharf, permitting anchorage and docking manoeuvres for ships of up to 10 metres draft.
HEALTH: Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Deratisation Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive free pratique and should not fly Quarantine Flag. If suspected disease or fever on board it is advisable to cable Agent before arrival.
TUGS: Available: 4 tugs of up to 600 h.p.
BERTHING: A wharf 1,300 ft. in length, with 1,050 ft. available for tying-up. The wharf is being extended 600 ft. and will be dredged the entire length of the quay so as to receive ships of up to 10 metres draft.
MEDICAL: All facilities available. If doctor needed on arrival or making emergency call to land sick persons, cable ETA 12 hours before arrival.
FRESH WATER: At present furnished by the port, at the rate of 15 tons per hour, from the city's system.
FUEL: Not available.
REPAIRS: Various mechanical workshops for the execution of shipboard repairs, equipped with lathes, presses, planes, electric and acetylene welding, drills, power-saws and grindstones, etc. The big shipyards of Verolme are situated in the Bay of Jacuecanga, near the port of Angra.
CUSTOMS ALLOWANCES: For each crew member, 2 cartons of cigarettes and one bottle wine or spirits.
WATCHMEN: Gangway watchmen strongly recommended for any vessels working cargo with shore labour on board. Watchmen from shore not necessary for coal, iron ore and oil cargoes.
CONSULS: There are no Consuls in this port. They are situated in Rio de Janeiro.
TIME: The local time is GMT minus 3 hours.
HOLIDAYS: 1st January; 1st May; 29th June; 7th September; 8th December; 25th December; 31st December.
AUTHORITY: Capitania dos Portos em Angra dos Reis.

BELEM: 1.25 S. 48.25 W.

DOCUMENTS:
6 copies of Crew List.
6 copies of Passenger List.
3 copies of Stores List.
2 copies Crew Declaration.
2 copies each of Information sheets, containing information required by (*a*) Maritime Police, (*b*) Custom's Authorities, (*c*) Port Health Authorities.

Manifests, etc., issued in sealed envelope addressed to the Custom's by the Brazilian Authorities in port of loading. Vessels also issued with a document to be handed to Custom's commencing with first port of loading, and each port thereafter, for each port of call in Brazil.
PILOTAGE: Pilot usually ordered through vessel's Belem Agent, ETA at least 72 hours in advance and confirming not less than 24 hours prior to arrival. Vessels can apply direct to pilot station (on condition that local radio station is operating). Telegraphic address "Praticagem – Salinopolis", and call sign of Salinopolis (or Salinas) radio station is PPL. Pilot boards at a point 7 miles North of Salinas lighthouse; a red motor-launch is used. Launch carries a red flag with a black P; it also has a black P painted on each side and on cabin roof. If pilot boat not in position on arrival of vessel, position 7 miles North of the light is a safe anchorage. Masters who do not know area should approach Salinas with caution.
BERTHING: Berthing alongside 5,000 ft. of quay governed by draft, and maximum safe draft is 22 ft. Vessels between 22 ft. and 24 ft. 6 in. can work safely at anchorage of Val de Caes, about three miles from quay. Vessels deeper than 24 ft. 6 in., remain at anchorage of Icoaraci, 7 miles from the port. Between Icoaraci and Val de Caes, there is a shallow spot at Tapaná, which ships should approach with caution, although bottom is soft mud and sand.
TANKERS: At oil terminal of Miramar (Val de Caes), vessels of the Shell "H" class (18,000 tons dw) may berth or unberth at any state of the tide, subject to draft. Maximum depth alongside berth at low water 26 ft., the same as that of approach channel. Mooring at this berth is to buoys inside the line of the "T" jetty.
HEALTH: Maritime Police, Customs and Port Health board vessel on arrival at whichever anchorage is used, or alongside. Pratique granted on the presentation of documents. If port *not* first Brazilian port of call, Port Health Authorities not required, although Police and Customs will still board. After first Brazilian port, Port Health only required in cases of illness or death. The use of quarantine "Q" flag not necessary.
RADIO: No VHF facilities in the area. Suggested that ship contacts Belem Agent through Barbados Radio, and this is also usual way that vessels are contacted by Belem. An alternative to Barbados Radio is the United States radio station at Chatham, Virginia.
TUGS: Tugs in area are small, underpowered and useless for berthing or unberthing. Brazilian Navy maintains four deep-sea tugs (Corvettas), for use in cases of extreme emergency.
STEVEDORES: Stevedoring gangs for day shifts 0630 and 1230 hrs. and 1630 hrs. for night shift. Loading and discharging rates exceptionally good, particularly if vessel working at anchorages into lighters. Any delays to vessels alongside can usually be put down to the lack of official clearances in case of loading export cargo.
MEDICAL: Notice of required medical assistance should always be given in advance. There are a number of first-aid posts for minor complaints. Vaccination Certificates for smallpox are essential, and, although not required officially, yellow fever vaccinations recommended.
DENSITY: Strong outflow of Amazon and its tributaries is such that water at Salinas is only semi-salt. In the river itself, the water becomes slightly brackish, and half way to Belem, is absolutely fresh.
FRESH WATER: Fresh water only obtainable alongside main quay, and not at oil berth. It should be well chlorinated before use for drinking. Boiler water may be taken direct from the river at a point named Capim, near the entrance to Marajo Bay.
FUEL: Available, but due to Brazilian Custom's laws, as much advance notice as possible should be given in order to obtain correct documentation. A minimum of one weeks' notice recommended.
GANGWAY/DECK WATCHMEN: The employment of gangway watchmen recommended.
HATCHES: Hatches normally opened and closed by stevedores, but if it is raining they are inclined to shelter before closing.
CUSTOMS ALLOWANCES: Custom's Authorities do not normally search ship's crews, and reasonable quantity can remain in the possession of crew members. However, no attempt should be made to take more than a reasonable amount ashore.
IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

In the event it becomes necessary to disregard the Mooring Master's advice, in order to ensure safety of the vessel, the Master must forward a full written report of the circumstances for delivery to the Captain of the Port through the Terminal. It is the responsibility of the Master to notify the Mooring Master of any special conditions or peculiarities such as defective navigation equipment, tackle, gear or lack of necessary equipment which might impose hazards related to handling, mooring and loading the vessel.

Vessel must be moored to the entire satisfaction of the Mooring Master.

Unsatisfactory conditions will be reported to the Superintendent of the Terminal, who is empowered to reject the ship for future calls unless the reported difficulties have been remedied.

Amidships derrick or crane capacity must not be less than 5 tons so that hose can be hoisted and connected.

MOORING: Vessels are moored to six buoys by ropes and they should have sufficient ropes in a good condition in order to ensure safe mooring. Normally minimum of two ropes are used for each buoy.

BALLAST: No slop facilities are available for dirty ballast.

Brazilian Laws are very strict with regard to the pollution of coastal waters. Vessels are not allowed to discharge dirty ballast into the water. Heavy fines are imposed for violations. To offenders, fines will be charged (besides resulting delays) according to the ship's tonnage.

This entails the requisitioning of a special Pilot earning 100% on the total ordinary bill. Pilotage very expensive.
RESTRICTIONS: No restrictions to entry in Paranaguá Bay day or night. Sometimes, entrance channel not usable after dark because of buoys drifting out of alignment; however this is rare.

Copy of Passenger/Negative Passenger/Transit Passenger Lists.
2 Copies of Crew List.

PILOTAGE: Bar pilotage compulsory. Vessels must await pilot at whistle light buoy No. 10, identifiable by black and white vertical stripes and lies approximately one mile to E.S.E. of end of Easterly breakwater. Pilot launch or pilotage association have no means of communication with the ship; in daytime, the launch can be identified as it is painted red. Requests for a Pilot to be made by Agent at least 12 hours in advance for vessels entering and two hours for vessels sailing. Bar Pilots either bring vessels with cargo to discharge/load direct to berth, or up to inner anchorage (when no berth is available or in case of vessels en route to Porto Alegre).

ANCHORAGES: Official anchorage situated at a point between inner light buoys Nos. 4 and 5, just before entrance proper to inner approach channel. In case of necessity, vessels may discharge/load to/from lighters at anchorage where depth is over 35 ft.

RESTRICTIONS: Depending on weather conditions and subject to prior arrangements with Bar Pilotage, vessels drawing less than 24 ft. may enter or leave any hour of day or night. Vessels drawing over 24 ft. usually have to wait for daylight to enter/sail but if weather conditions are exceptionally favourable and paramount reasons are involved it is possible for vessels drawing up to 26 ft. to enter/sail at night.

MAX. SIZE:
Bar: Max. official safe draft on Bar in fair weather is 32 ft. salt water.
Port and Anchorage: Official draft for inner approach channel and for berthing/loading alongside is 29 ft. fresh water. Density of water in port may vary considerably in a matter of hours, from completely fresh to brackish, and even practically fully salt, depending on wind direction; but as a rule the density is in the region of 1005. For this reason, it is safer to consider official safe draft within port as 29 ft. freshwater basis. Vessels wishing to complete loading down to max. 32 ft. salt water Bar draft may do so at anchorage, ex lighters.

HEALTH: (*a*) Vessels arriving from a foreign port of call must receive visit of Port Health Authority. Each passenger (whether to land or in transit) and crew member must be in possession of a valid international vaccination certificate against smallpox.

(*b*) Maritime Health Declaration has to be made out and handed to Doctor at time of visit. When all papers have been examined and found in order, the Doctor will authorise lowering of the yellow flag and hand over free pratique.

(*c*) Vaccination against smallpox can be made on board and respective international certificate issued.

(*d*) In case of death, suspected disease, serious accident, etc., on board before vessel arrives in port, Master should radio Agent giving full particulars so that necessary steps may be taken with Health/Police authorities.

RADIO: Radio Junção, call sign PPJ, situated on outskirts of Rio Grande, is a receiving/transmitting station, operating on a wavelength of 600 metres (500 kc/s). There is telephone communication between radio station and shipping offices so that, normally, messages are relayed without any appreciable delay. Radio messages may also be despatched through Florianopolis Radio, via Western Telegraph, and these are also received quickly, under normal conditions.

TUGS: Not compulsory but weather conditions at Rio Grande usually make employment imperative. Customary to use one tug to assist vessels to berth and two on sailing (see also "Berthing"). Tugs usually join vessel as soon as she has come through approach channel, in the port proper, but in the case of deeply-laden vessels, normally attend before vessels enter inner approach channel. Ship's lines always used.

BERTHING: No mooring buoys. Vessels berth alongside quay to load/discharge. If weather conditions permit, recommended that vessels should berth starboard side to wharf in order to facilitate sailing, especially if there is a possibility of night departure. Turning vessel round before coming alongside, however, may not always be advisable or safe because of wind and current conditions at time. Vessels loading down to maximum safe draft must be starboard side to quay on sailing. If weather does not allow ship to turn on arrival, she must do so as soon as conditions permit, before being too deeply laden.

Oil Carriers: Tankers measuring over 200 metres long have entered and berthed at Rio Grande, coming alongside port side to berth. On sailing, they go out stern first, turning after negotiating approach channel and reaching anchorage. Favourable conditions of wind and current necessary for this manoeuvre.

Installations for discharge of petroleum products: All fuel oil discharged at tanker berth within port proper – i.e. subject to a maximum draft of 29 ft. White petroleum products may also be discharged at

this berth. A deep-water tanker pier has been constructed close to the anchorage but it is in limited operation for white products only, because pipe-lines to main storage tanks and refinery have not yet been installed. This pier, which is capable of accommodating two vessels of 160–180 metres overall length, has a depth of over 35 ft.; it also has installations for supplying fresh water which may, in case of necessity, be used by cargo vessels. No facilities for the discharge of residues.

STEVEDORES: Working hours, straight time, 0730/1130 – 1300/1700 (week-days). During week-days, labour for morning shift which commences at 0730 hours, may be ordered up to 0715 hours; at 1245 hours extra gangs may, if necessary, be engaged for afternoon shift commencing at 1300 hours. For night work longshoremen (i.e. dock labourers as distinct from stevedores) must be ordered before 1600 hours; stevedores, tally-clerks, etc., for night work may be engaged up to 1845 hours for shift that starts at 1900 hours. Sunday/holiday work must be ordered previous day, up to 1600 hours.

MEDICAL: Two hospitals available which have adequate facilities to deal with majority of cases. Only vaccination required at present is against smallpox.

FRESH WATER: Water can be supplied ex-quay hydrants at rate of about 10–15 tons per hour, at any point of wharf. No barges available for supplying fresh water which has to be taken alongside.

FUEL: Bunkers can be supplied direct from alongside, either by pipe-line or from trucks. Oil companies have to receive prior authority from their principals and local taxes and charges have to be paid before bunkers are supplied. Rate of loading ex-pipe-line is about 150–200 tons per hour and from trucks 10–15. No barges available to supply bunkers. Cost of fuel/diesel oil very high – about three times that of normal supply ports.

DEVELOPMENTS: Reported that there are plans to dredge port and channels (approach and bar) to permit following safe drafts: Bar – 33 ft. Port/inner approach channel – 31 ft.

GANGWAY/DECK WATCHMEN: Advisable to employ gangway watchmen, day and night. Deck/hold watchmen may also be engaged whenever necessary the rates being about 50% higher than for gangway watchmen.

OPENING/CLOSING HATCHES: Opening and closing of conventional hatches normally done by stevedores, without any extra cost; advisable, however, for steel hatches to be handled by crew.

CUSTOMS ALLOWANCES: Each crew member allowed one carton cigarettes (or the equivalent in pipe tobacco) and one bottle of spirits, per week. Ships that remain in port for over a week may request Customs, through their Agent, to open bond for another weekly issue.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

PILOTAGE: Application for Pilot cabled by Master to Agent who makes all arrangements with Pilots' Association. Advance notice of ETA should be cabled by Master 48 and 24 hours before arrival. Pilot boat painted red. The location where Pilot has to be taken is indicated on all charts.

ANCHORAGES: Inner anchorage can accommodate vessels with a draft of up to 33 ft., but there is sufficient depth of water in the outer anchorage to accommodate vessels with any draft.

MAX. SIZE: Maximum draft 30 ft., maximum length about 250 metres. The 10 metres quay situated next to the docks, where vessels discharge aviation gas, kerosene, etc., maximum draft of 33 ft., maximum length of about 250 metres. For vessels which load crude oil at the Madre de Deus terminal, or discharge lubricants, maximum draft 40 ft. Terminal situated about 18 miles up the bay from the port.

HEALTH: The Doctor only boards the vessel when Salvador is first Brazilian port of call or when there are passengers from abroad to disembark, in which case Master should advise Agent who will then take the necessary steps required by Port Health. A yellow flag should be flown if Port Health Doctor is required on board.

RADIO: Master should always endeavour to contact Agent through Radio Amaralina coastal station, call sign PPA, and Agent will contact Master the same way. Since this station has a limited range, the Agent at Salvador may be contacted via Rio Radio when northbound, or Olinda Radio/Fortaleza Radio when South-bound.

TUGS: Tugs are rarely used for berthing, but occasionally used for unberthing. When used, the line is supplied by vessel. Vessels unberthing at Salvador usually avail themselves of a line to a buoy. For tankers berthing at 10 metres quay, a tug is usually supplied to help vessel moor and unmoor. When coming alongside tug joins vessel inside port.

BERTHING: No restrictions, but if draft over 28 ft. some Pilots prefer to manoeuvre in daylight. Tankers at 10 metres quay may unberth at any time, but Pilots usually refuse to berth during hours of darkness because of the bad lighting on this length of quays.

STEVEDORES: When vessels are due to arrive on Sundays or holidays, and work is to be undertaken during these days, Master must cable Agent giving details of distribution of cargo, as gangs must be taken out on previous working day. Average loading rate at Bahia about 20 tons per gang/hour for usual commodities loaded such as sisal, tobacco, cocoa butter, cocoa beans, etc.

MEDICAL: When vessels arrive over week-ends or during holidays advisable that Master cable Agent giving advance notice of medical attention required if case is serious. For routine medical attention no previous advice required as ample medical and hospital facilities available.

TANKERS: For tankers discharging aviation gas, kerosene, etc., at the 10 metres quay, a pipe-line of 4 in. is used. Only one tanker at a time may berth at this quay. For loading crude oil and discharging lubricants at Madre de Deus terminal, a pipe-line of 12 in. used. Four berths available at this terminal with drafts of 40, 36, 30 and 25 ft.

DENSITY: Salt water.

FRESH WATER: Fresh water available and is pumped on board with hoses at the rate of about 20 tons per hour. At 10 metres quay, fresh water is pumped on board at the rate of 5–10 tons per hour.

FUEL: Marine gas oil and fuel oil available.

DEVELOPMENTS: The normal dock quay has been joined to the 10 metres quay closing off a small basin. Dredging is presently being undertaken and vessels will be able to come alongside the new length of quays in the future with a draft of up to 30 ft. When the closed off basin has been completely filled in, new warehouses are to be built for the handling of dry cargo. The breakwater running parallel with the quays is being extended in its Northern end by about 280 metres. Work however, on both these projects is comparatively slow, and it is impossible to foresee when either will be completed.

GANGWAY/DECK WATCHMEN: A gangway watchman is recommended.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: Customs authorities only permit each crew member one carton of cigarettes out of bond. However, if a vessel is staying in port for a long period Master may request Customs to break seal and make a new issue of tobacco, as many

times as reasonably required. Each crew member allowed one bottle of spirits which must be opened.

DOCUMENTS:

Maritime Health Declaration.
Vaccination Certificates.
5 Crew Lists.
3 Stores Lists (incl. deck/engine).
3 Personal Effects Declaration.
Bunkers Declaration.
Passenger List or negative passenger list.

From each loading port a Manifest plus simple copy of each Bill of Lading addressed to "Inspector of Customs". If vessel called at any port (including Brazilian ports) where no cargo was loaded for Santana, a negative declaration of cargo must be presented.

PILOTAGE: No Pilots available either for the North Channel entrance and/or for docking and casting off operations.

ANCHORAGE: In front of the port, protected anchorage between mainland and Santana Island, where vessels can safely anchor at any location. Bottom is mud.

RESTRICTIONS: Vessels can depart at any stage of tide. Night transit in North Channel is at Master's discretion.

Channel transit restricted to 33 ft. in low water. Due to shifting of mud banks it is recommended that a set of up-to-date Brazilian nautical charts, covering from outer bar to Santana Port, should be used.

Tidal range on outer bar area is about 8 ft., on "Banco do Meio" area is about 16 ft. All data published on Brazilian nautical chart refers to average spring low-water tide.

The Brazilian Hydrographic Office publishes annual tide tables for Barra Norte do Rio Amazonas (Ilha do Brigue) 00° 55.0′ N. and 05° 04.5 W., and Santana Roads (00° 03.4′ S. and 051° 10.8′ W.).

MAX. SIZE: On East side of floating ore pier, general cargo pier has a depth alongside of 30 ft. Along floating ore pier depth ranges from 35 to 90 ft. (at low water). 35 ft. on East end of pier. Tidal range about 9 to 11 ft. Tidal current at middle of river ranges from 2 to 3 knots, while close inshore along ore dock it runs approximately 1–1½ knots. Amazon river water at Santana is fresh in spite of tides.

HEALTH: Health authorities visit vessel arriving from abroad. Authorities require regular ship's gangway to be lowered. Jacob's ladders not accepted. After Master having handed over Declaration of Health, medical authorities issue free pratique. If entering after calling at another Brazilian port, free pratique automatically granted.

RADIO: Vessels scheduled to load ore at Santana must radio Belém (Pará) Agents (preferably via Chatham or Amagansett Radio) at least 48 hours prior to ETA North Channel. Other means of communication not satisfactory and result in delay. ICOMI maintains own radio-telegraph service between Macapá and Belém. Macapá station located at port of Santana, call letters ZZK5, sends on 6765 kc. and receives on 6200/6400.

TUGS: No tugs available.

BERTHING: Recommended that amidship hatches be used for Santana cargo. Vessels berth according to direction of tidal current. Berthing operations assisted by a motor craft to place lines on shore, East of pier. On West side, lines moored to the bitts on floating fender. Linesmen available to assist berthing and shifting. Ore carriers have preference when docking.

STEVEDORES: Stevedores come from Macapá about 25 km. by road from the port. Also checkers and coopers. Conveyor belt for ore loading fixed, consequently vessels must be shifted by own winches to load various hatches. Effective average loading rate 1,000–1,100 long tons per hour. Special caution must be taken not to pump all ship's ballast before loading starts, since the height of boom is 40 ft. above water level. Cargo belt trimmed only. Hire of trimmers is for ship's account and is performed at anchorage.

MEDICAL: Medical attention may be arranged at Macapá through ship's Agent.

TANKERS: Discharge at the Dolphins Pier, about 150 metres West of floating pier. Pipe-lines lead to tanks ashore (distance from pier 1,000 metres). Storage tanks have capacities for 35,000 barrels of diesel oil, 9,500 barrels of gasoline and 60,000 barrels of fuel oil. Discharge of different bulk liquids effected after flushing pipe-line. Vessels liable to fines, by Port Captaincy, for bulk liquids discharged in port areas.

DENSITY: The Amazon river water at Santana Port is fresh water at any stage of tide. The temperature of river water being normally around 82°F. makes it possible that a density below 1,000 may be found. Checking density during load operations is recommended.

FRESH WATER: No drinking water available.

FUEL: No bunkering facilities available.

GANGWAY/DECK WATCHMEN: Watch by crew members sufficient.

OPENING/CLOSING HATCHES: Ore-carriers: service carried out by crew. General cargo vessels: service executed by stevedores.

CUSTOMS ALLOWANCES: Limited quantity for use during ship's stay.

CARGO GEAR: No additional requirements as to gear. A heavy-lift stiff leg derrick mounted on the pier. Boom: 60 ft., Mast: 37 ft. 6 in., Capacity: 65 metric tons. Mobile crane (maximum lift 2·5 tons) available for discharge of general cargo from small vessels.

IDENTITY CARDS: Foreign crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS: None. Documents which are to be visaed by a Consul must be sent to Belém.

REPAIRS: Only in cases of extreme emergency and then only minor repairs.

REPATRIATION: Effected by ship's Agent. No Immigration authorities at Macapá.

AIRPORT: Macapá airport 25 km. from Santana near city of Macapá. Numerous scheduled domestic flights from Macapá to Belém, a trip of 1 hour and 15 minutes.

TIME: GMT minus 3 hours. Summertime (one hour forward) as from November 1st till February 28th.

HOLIDAYS: New Year's Day (January 1st); Tiradentes (April 21st); Martyr of Independence; Labour Day (May 1st); Independence Day (September 7th); Proclamation of the Republic (15th November); Christmas Day (December 25th).

TELEPHONES: No facilities for placing telephones on board.

GENERAL: Port of Santana: For establishment of tide times at Santana (00° 03′ 26″ S.–51° 10′ 58″ W.), 40–45 minutes must be added to the times shown in the tables for Macapá.

Alongside the ore-loading pier, the tidal current continues to run for 10–15 minutes beyond the time computed from the tables. In mid-stream, the delay in the change of current is 60–90 minutes.

Vessels can dock or depart at any time without regard for tidal conditions. Special caution must be taken not to pump all ship's ballast before loading starts, since the height of the boom is 40 ft. above the water level.

PILOTAGE: Pilotage compulsory and request for Pilots should be made through Agent at least 3 hours in advance. Pilot station equipped with VHF phone operating on Channels 6 and 16. Pilot launch is about 12 metres long, red in colour and flies a red flag with a black "P" in the centre. Pilot prefers to board on portside. When pilot launch unable to meet vessels in outer roads due to bad weather Pilot Association will contact Masters with instructions to proceed closer to port, with indication of a given point, where Pilots can be safely transferred.

A Harbour Pilot is used for berthing, and Pilots change at the pilot station in the channel.

ANCHORAGE: Outer roads. Centre of anchorage located at (24° 00′ 51″ lat., 46° 20′ 39″ long.) a bearing of 074° one mile from Palmas Island.

Anchoring West of 46° 22′ 15″ and North of 24° 00′ 24″ *is not allowed.* Pilot will normally board at this area; however when requested by pilot station (VHF Channel 6), usually in bad weather, vessels should proceed from their anchorage to 23° 59′ 57″ lat. × 46° 20′ 05″ long. and from that point take true course 057° up to 23° 59′ 33″ lat., 46° 19′ 26″

long. proceeding from there on at 094° until meeting pilot boat (maximum 1 mile).

MAX. SIZE: Regulations in force stipulate that vessels drawing maximum 28 ft. and not exceeding 750 m. in length may enter/leave the port at any state of tide, day and night. Those drawing 28 ft./30 ft. are subject to tide. These are the official drafts for the port, however in practice, depending on tide, vessels up to 32 ft. may also enter/leave the port.

RADIO: Santos Radio, call sign PPS.

HEALTH: Port Health Authorities consisting of one doctor and one assistant will check all vaccination certificates and issue a free pratique pass, which shall remain on board for presentation at subsequent Brazilian ports of call. Masters can obtain free pratique by radio, which does not mean that the doctor will not come on board, but only that other authorities can board the ship before his arrival.

Free pratique by radio: Master should radio to Agent (in Portuguese) as follows: "Para Sa Portos condições sanitárias a bordo satisfatõrias" (Master's name) which means: "Sanitary conditions on board satisfactory". *N.B.* "Sa Portos" is the cable address of Port Health Authorities.

TUGS: Five tugs available, equipped with two radios (VHF Channels 10, 13 and 16). Up to 1,600 h.p.

Tugs' service for mooring/unmooring not compulsory and depends on Masters' decision with Pilots' advice.

BERTHING: *Wharves.* Total length 6,013 metres. Inner Harbour (Saboo New Quay) 800 metres (depth 11 metres). Barnabé Island pier 300 metres (depth 10 metres).

Special cargo handling facilities. Refrigerated cargo: Refrigerated cargo after discharge is deposited in the cold storage (between warehouses 23 and 25). The Receiver is usually responsible for cartage and storage arrangements as well as for the required temperature to be maintained in cold chambers.

Bulk cargo. Grain elevators: There are 3 elevators in Santos from which wheat can be discharged direct into freight cars, owned by: Cia. Docas (with external silos) between Sheds 25 and 26; Moinho Paulista between Sheds 12A and 13; Moinho Santista between Sheds 8 and 9.

Cosipa Terminal, depth 10 m.; Ultrafertil Terminal, depth 10 m.

Fertiliser, sulphur, etc. in bulk can be discharged at any point along the quay where 6-ton cranes equipped with automatic motor-driven grabs or shovels are in operation. Alternatively, cranes with ordinary hand-filled buckets are used. The usual place for handling this type of cargo is by the Saboo bend.

Heavy lifts: Cia. Docas operates 2 floating cranes – one 60 ton and one 150 ton. The 150 ton crane reaches 22 metres in height and can handle lifts within a radius of 10 metres.

Special/valuable cargo: Special or valuable cargo, objects of art, precious metals, etc., are discharged without special formalities and may be kept in Shed 12A, where there is a special safe.

BULK HANDLING FACILITIES: The Ultrafertil Terminal is situated East of the Cosipa Terminal and both make use of the same manoeuvring basin with depth of 10 metres, connected with the port of Santos by a dredged channel 8 km long, 10 metres in depth and 60 metres in width.

Cosipa Terminal consists of a pier 150 metres in length and 22 metres in width, built on concrete tubing, with a depth of 10 metres, allowing for the berthing of vessels of up to 22,000 tons dwt. Future plans foresee the lengthening of the pier to 250 metres and a depth of 13 metres, enabling it to receive vessels of 45,000 tons dwt.

Equipment for the discharge of coal and ore is installed at the pier, capable of handling 600 tons per hour, as well as equipment for the loading of steel plates produced at the plant.

Ultrafertil Terminal is an open dock in the form of an "L" built on concrete tubing, 240 metres in length and 15 metres in width. At its main point, vessel of 23,000 tons dwt. and drawing 10 metres may berth. The secondary point permits the berthing of vessel of up to 3,000 tons dwt. (liquid gas carriers).

The terminal is especially equipped for the discharge of bulk solids at a rate of 500 tons/hour and is likewise equipped with pumps and adequate pipes for the discharge of liquified gas.

Container Terminal at inner part of port. Equipped with three heavy weight shore cranes, capacity 30 tons each. Loading/discharging rate: 20 pallets per hour, using fork lifts.

STEVEDORES: All longshoremen are in employ of Cia. Docas, which holds charter for general operations at Santos Docks. Their services can be requisitioned up to 1500 hrs. for vessels at berth/expected to berth next day. Stevedores ordered but not used shall be paid full day or night. Therefore, if the men should be kept standing by (inactive) at 0700 hrs., their period runs up to 1700 hrs., and at 1900 hrs., their period runs up to 0400 hrs.

FRESH WATER: Adequate supply of fresh water is always available from hydrants along the quay (day and night) or from water-barges (Pilões). Water barges cannot supply more than 2 ships per day, their capacity being only 250 tons, which can be pumped into the ship's tanks at the rate of 80 tons per hour. Cia. Docas should be advised 24 hours in advance, priority being given to passenger vessels.

FUEL: MFO, MDF, and gas oil can be supplied at Vallongo by Shed No. 1 or at the Saboo New Quay Extension, or by barge, if up to 300 tons. Applications for supplies should be made a few days in advance to avoid delay in delivery.

TANKERS: Discharge terminals at Saboõ Quay, and at Ilha Barnabé. Maximum draft 30 ft.

REPAIRS: There are several workshops at Santos; however only capable of handling small jobs. Complicated engine repairs should be avoided as much as possible.

WATCHMEN: Masters of vessels may at their own discretion have crew members posted as watchmen, but are strongly recommended to have shore people for the job, specially when vessel is carrying any kind of pilferable cargo.

GANGWAY GUARDS: The Maritime Police and Customs House, frequently send on board some personnel to keep gangway watch during vessel's stay. On passenger liners the Maritime Police keeps a guard of 5 men plus one foremen while Customs keeps 3 men. On cargo ships, 2 men and 1 man, are assigned respectively. These officials always expect to be granted a cabin, plus regular meals.

OPENING/CLOSING HATCHES: May be performed by ship's crew or by stevedores.

CONSULS: The following countries are represented in Santos:

Italy	Chile	Panama
Denmark	Argentina	Greece
Finland	Belgium	U.S.A.
Paraguay	Uruguay	West Germany
Portugal	El Salvador	Norway
France	Holland	Bolivia
U.K.	Sweden	

DEVELOPMENTS: Dredging operations being carried out in order that vessels up to 45,000 tons with a draft of 12·3 metres can come into the port and go alongside Conceicaozinha. As a second phase, this dredging will be extended to the estuary to attain a depth of about 14 metres. From this locality up to the Cosipa channel, the dredging should reach a depth of 12 metres.

LOCATION: Terminal Maritimo Almirante Barroso (TEBAR) is located on the West edge of the Sao Sebastiao channel. Safe access is made through the South entrance. The approximate geographical position of berths is Lat. 23° 48′ 2″ S., Long. 45° 23′ 3″ W.
DOCUMENTS: Inward clearance is effected on board immediately after docking by Government Port Officials and Agent's representative. It is necessary that the following documents be ready on arrival.
Any document regarding outward clearance of the ship at last port of call.
5 copies Crew List.
2 copies Store List.
2 copies Personal Effects List.
3 copies Passenger List.
3 copies Cargo Manifest.
3 copies Bill of Lading.
PILOTAGE: Pilotage is compulsory for vessels calling at Sao Sebastiao as from the following limits:
South – line joining Ponta da Sela to Ponta Gaeca.
North – line joining Ponta das Canas to Ponta do Arpoar.
Pilots await near these limit lines. They meet the vessel via launch. Pilots may decline to moor the vessel if it is not equipped with satisfactory mooring equipment, liners, gear, etc., or if it is not sufficiently ballasted.
NAVIGATING AIDS: Marking the South entrance of the channel itself there is a white light on Ponta da Sela exhibited from a tower painted in white and red horizontal stripes. A small rocky island is marked by a white light exhibited from a square tower painted white on Lage dos Moleques. There is a red light on Pontinha exhibited from a square white painted tower. There are two red lights, one on the terminal mooring dolphin (N) and the other on the pier itself (S). Groups of storage tanks are visible on a clear day and are located about 0·6 of a mile 282° from the head of the pier.
ANCHORAGES: Temporary anchorage for Port Authorities Clearance; located approx. 1·5 miles N.E. of Lage dos Moleques light.
Anchorage for Tankers Awaiting Berth: about 1 mile S. of Ilha Bela village.
Anchorages for the Lightening of Tankers located about the joining line between Ponta da Sela and Ponta do Viana. Water depths of 25 m. to 35 m. (82 ft. – 115 ft.) with seabed of clayed/sanded mud.
RESTRICTIONS: The terminal normally operates around the clock. Ships are moored and unmoored at any hour except when an unexpected event arises, such as breakdowns, gales, heavy squalls, and so on.
MAX. SIZE: Maximum allowable draft is as follows:
North Pier: East Berth (No. 1): 17·0 m. (56 ft.). West Berth (No. 2): 12·5 m. (41 ft.).
South Pier: East Berth (No. 3): 220 m. (72·2 ft.). West Berth (No. 4): 15·0 m. (49·2 ft.).
HEALTH: Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Deratisation Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive free pratique and should not fly Quarantine Flag. If suspected disease or fever on board it is advisable to cable Agent before arrival.
RADIO: Vessels under time-charter to Petrobras bound for Sao Sebastiao should advise Company of ETA 48 hours before arrival direct to PPA 25 (Petrobras own radio station) as well as to Agent's cable address through PPR (Rio Radio Brazilian Post Office radio station). In turn they will pass message to the terminal. Confirmation or change of ETA should be cabled 24 hours prior to arrival. Vessels equipped with VHF radio telephone should call on Channel 16/DELTA: 156·8 mHz (and then change to another agreed channel) when within range for berthing instructions. All ETA'S should indicate whether it is local time or GMT. English is generally understood by Pilots and terminal representatives. Weather forecasts as well as Notices to Mariners are transmitted by PWZ and PPR radio stations. Radio equipment should not be used at the piers. Communication ship-to-shore will be by telephone.
TUGS: Mooring and unmooring is assisted by two 2,360 b.h.p. tugboats (twin motors – equipped with "KaMeWa" controlled-pitch propellers). While rendering such assistance the tugboats act under orders of Harbour Pilot. These tugs are fitted with fire pumps and monitors (including mechanical foam) to assist in fighting fires.
The following tug signals which have been approved by the local Captain of the Port are listed below for a Shipmaster's guidance:
(*a*) For calling tugs: 4 long blasts followed by 1 or 2 short blasts of ship's whistle will call 1 or 2 tugs respectively.
(*b*) Before towing line is made fast: 2 short blasts; prepare to push on bow or to pick up line from ship's bow. 3 short blasts; prepare to push on stern or to pick up line from ship's stern.
(*c*) After towing line is made fast: 1 long blast; pull to starboard. 2 short blasts; pull to port. 3 short blasts; give up pulling.
(*d*) Manoeuvring alongside ship's hull: 1 short blast; to pull. 2 short blasts; to push.
All orders received by tug will be acknowledged with a distinct short blast.
As both tugboats are provided with VHF, manoeuvring orders may be given by radio.
Usually orders to fore tug are given by a mouth whistle and to aft

tug by the ship's whistle. Two long blasts followed by a short one is used either to call small craft or pilot launches. To call motor-boat (launch), 1 long blast followed by a short one; both tugs are fitted with blinker signal lamps.

BERTHING: North Pier: East Berth No. 1, designed for tankers up to 115,000 dwt. West Berth No. 2, designed for tankers up to 65,000 dwt.

South Pier: East Berth No. 3, designed for tankers up to 300,000 dwt. West Berth No. 4, designed for tankers up to 115,000 dwt.

All berths equipped with "Chicksan" loading arms of 8 in. and 12 in. diameter. Maximum pumping rates up to 48,500 barrels per hour.

BALLAST: No slop facilities are available for dirty ballast. Brazilian laws are very strict in regard to the pollution of harbour and coastal waters. Vessels should not discharge dirty ballast, ashes, refuse, etc., into the water. Heavy fines are imposed for violations. All overboard discharge valves from cargo tanks and bilges are to be secured before any loading or discharging commences. All deck scuppers should be plugged to avoid harbour contamination should an oil spill occur. To offenders, fines will be charged (besides resulting delays) according to ship's tonnage.

MEDICAL: Medical treatment and/or hospitalisation, if required, is provided in the private local hospital. Dentists are available in the area. For emergency cases (serious illness or injury) TEBAR first medical aid may be requested by the Master. Internal telephone number is 20. If patient does not speak Spanish or Portuguese, an interpreter should accompany him.

FRESH WATER: Fresh water can be supplied, if necessary; however, supplies are limited to essential requirements (up to 400 tons). Rates: Minimum 91 tph, Maximum 148 tph.

FUEL: Bunkering facilities are primarily intended to supply FRONAPE tankers only, but in emergency cases other vessels may be replenished with bunkers in very limited quantities.

REPAIRS: Repairs of minor nature can be effected in Sao Sebastiao. When alongside pier, vessels must maintain engines and propulsion machinery in readiness to leave the berth under full power on short notice. No repairs are permitted which would interfere with this requirement. In the event of a ship unable to leave the pier under its own power, when requested to do so by the terminal, the terminal reserves the right to arrange to have the ship towed from the pier. Any expenses incurred or delays resulting from such an operation will be for the account of the ship.

CUSTOMS ALLOWANCES: For each crew member, 2 packets of cigarettes and one bottle of wine or spirits. While the vessel is in port, Brazilian custom's officials are assigned on board to ensure compliance with customs regulations. Meals must be supplied to these officials during regular meal hours. Brazilian laws are strict in regard to smuggling and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, alcoholic drinks, souvenirs, etc., should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port. By no means will any commercial transactions be tolerated, be it either among terminal employees, crew members or anyone else. Cigarettes or other stores in bond are not obtainable in Sao Sebastiao.

CONSULS: No consular representatives are reported to exist in the area.

TIME: Local time is GMT minus 3 hours.

SHORE LEAVE: The access pier is 1,600 metres long. The crew can use it to get ashore, but special passes are required for this purpose. There is, however, a launch service provided by Agent.

AUTHORITY: Petroleo Brasileiro S.A.

AGENT: See "Santos".

TRAMANDAI (Porto Alegre): 30.01 S. 50.06 W.

ALMIRANTE SOARES DUTRA TERMINAL: Terminal Maritimo Almirante Soares Dutra – TEDUT, is located 6 km. from Tramandai, which is 134 km. from Porto Alegre, Capital of the state of Rio Grande do Sul. The Buoys (SBMs) are positioned 1·9 and 2·4 miles from the beach and their geographical co-ordinates are:

SBM–1 (West), Lat. 30° 00′ 40″ S., Long. 50° 05′ 42″ W,
SBM–2 (East), Lat. 30° 01′ 06″ S., Long. 50° 05′ 10″ W.

DOCUMENTS: Inward clearance is effected on board after the ship's arrival. The following documents must be ready on arrival:

Any documents regarding outward clearance of the ship at the last port of call.
8 copies Crew List.
3 copies Store List.
3 copies Personal Effects List.
3 copies Passenger List.
3 copies (one visaed) Cargo Manifest.
2 copies Bill of Lading.

PILOTAGE: Sea Pilot not required. All manoeuvres will be undertaken by the vessel's Master with the help of a TEDUT Mooring Master who will board the vessel in the anchorage area and advise the vessel's Master on all operations such as mooring, connecting hoses, unloading, unmooring, etc.

ANCHORAGE: The advisable anchorage site is 1·5 miles N.E. of SBM–2 (East), geographical position, Lat., 29° 59′ 30″ S., Long., 50° 04′ 30″ W. Depths, 21 metres. Seabed, fine sand and mud. Mooring Masters will board arriving tankers in this area.

APPROACHES: There are three conspicuous water towers named *Tourist, Agrimer* and *Tramandai.* There is also a small radar and meteorological watch steel tower nearby the pier in position Lat. 29° 58′ 34″ S., Long. 59° 07′ 18″ W.

RESTRICTIONS: Due to the peculiar conditions of the terminal, mooring undertaken only at daytime. Sometimes the leaving of launches seawards depends on the height of tide and the strength of the waves. Tankers may have to wait for favourable weather conditions so that mooring may safely be started.

MAX. SIZE: SBM– (West), designed for 105,000 dwt tankers, max. draft 16 m. (52 ft.). SBM–2 (East), designed for 200,000 dwt tankers, max. draft 17 m. (55 ft.). The distance between the vessel's bow and manifold must not be more than 140 metres for mooring to the SBM–1 (West) or 180 metres for mooring to the SBM–2 (East).

RADIO: Vessels bound for Tramandai should advise their ETA 48 hours prior to arrival direct to PPA 25 (Petrobras own radio station) as well as to their Agents (through PPR – Rio Radio – government station). In turn these stations will send messages to the terminal. Confirmation or change of ETA should be cabled 24 hours before arrival. Vessels may also contact TEDUT's radio-telephony station, either in AM or SSB on the following channels and frequencies:

VHF, conventional frequencies, Channels 11, 13, 14 and 16 on 156, 55/165, 65/165, 70/156 mHz respectively.

SSB, frequencies 2·182/2·815/4·383,38/8·770,8 and 2·647,5/4,078, 8/8·120,8 kHz for listening.

When within range, vessels equipped with radio-telephone should call first on Channel 16/DELTA-156·8 mHz and then change to another agreed channel, preferably 14/CHARLIE-156·7 mHz for mooring instruction. All ETA's should indicate whether it is local time or GMT. Weather forecasts as well as Notices to Mariners are transmitted by PWZ and PPR radio stations.

PRATIQUE: Display of quarantine signal – "Q" flag – on approach Tramandai must be maintained until free pratique is granted. The National Brazilian flag should remain hoisted throughout vessel's stay in the terminal. Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Deratisation Certificate, two Crew Lists. Vessels from another Brazilian port automatically receive free pratique and should not fly Quarantine Flag. If suspected disease or fever on board, it is advisable to cable Agent before arrival.

LAUNCHES: Mooring, unmooring and connection operations are assisted by the terminal's launches. While rendering such assistance the boats act under orders of the Mooring Master. Usually two service boats are at his disposition. Besides operational assistance they undertake transportation of Mooring Masters, personnel, Agents, ship chandlers, port authorities, etc.

ARRIVAL: Arrival time is considered to be the time the vessel reaches the anchorage vicinity or the time the Mooring Master boards the vessel, whichever occurs first. However, notice of readiness will not be considered as the time of arrival unless the vessel is in all respects ready to discharge. In the event berthing is delayed by weather conditions, tankers will be unloaded in turn. If, however, the weather is so bad that the port is closed and vessels awaiting discharge have to go out to sea, TEDUT may discharge another vessel on reopening if it arrives before the return of other waiting vessels. More rarely, the terminal Superintendnt may grant priority to a particular vessel out of turn, in special circumstances only. Exceptionally, and at the discretion of the Superintendent, two tankers will discharge at the same time.

MOORING: The Mooring Master will advise on the method of securing the ship. Tankers are usually moored by two bow nylon hawsers of 13 in. diameter and 45 metres length. Vessel's messenger nylon lines are shackled – one at a time – to the pick-up wires of the chafing chains by the launch crew and hove in (through the vessel's windlass warping bollard) until the lengths of the chafing chains are brought over the vessel's roller chocks/fairleads. Ship's engine may help the lead-in ropes (vessel's messenger) in coming up to the SBM.

The following items must be observed: Anchors must be well at home and secured with stoppers and brakes. Windlass warping bollards must also be ready to lift chain stoppers, wire strops, shackles, senhouse slips, crowbar, hammer, spikes and other gear to be placed on board for mooring purpose (equipment supplied by TEDUT). Two good eye-spliced (9 in. at least) nylon hand-inlines must be ready, at each side, on the focastle head, to be given to the launch, who in turn will shackle them to the hawser's pick-up wires (marked by little spar buoys).

HOSE CONNECTION: The Mooring Master will direct the terminal's working men in lifting, connecting and lowering the hoses. After the vessel is securely moored, the 16 in. floating hoses must be individually lifted to the rail by the ship's gear. Sundry hose securing and connecting equipment (strops, gaskets, nuts, bolts, wrenches, etc.) will be supplied by the terminal and put aboard the ship just after arrival. Hoses will be lifted by ship's derrick, preferably on the port side. Minimum lift of 5 tons capacity required. When wind force reaches about 8 beaufort scale and waves are 2·5 metres high, emergency disconnecting operation will take place, even at night time.

LOADING: Pumping must not be started without permission of the Mooring Master. The maximum allowable pressure is 10 kg/sq. cm. (150 p.s.i.). While the vessel is moored, the vertical angle formed by the nylon hawsers and the sea level should not exceed 30 degrees, for safety of the SBM's turntable. When necessary, due either to excessive pitching or by being too much trimmed by the stern, pumping of ballast must be concentrated in the fore-tanks, even if interruption of unloading becomes mandatory. So the Mooring Master may require cargo to be discharged, in certain stages, either from aft or for'd compartments.

As a rule, when unloading is over, the ship should have ballast on board at least 40 per cent of her total dwt tonnage. Besides the Mooring Master himself, some terminal workmen stay aboard ship. Therefore, room and meals for one officer and six crewmen should be supplied. Upon completion of discharge the Mooring Master will require the ship to pump sea water through the submarine pipe-lines to displace the remaining oil.

BALLAST: No slop facilities are available for dirty ballast. Brazilian laws are very strict with regard to the pollution of coastal waters. Vessels are not allowed to discharge dirty ballast into the water. Heavy fines are imposed for violations.

Tramandai is the largest Rio Grande do Sul seaside resort and any pollution of the sea in this area will cause damage to the beaches. Hence, no dirty ballast or any oily residues must be pumped overboard within a range of over 50 miles, if no safer alternative exists.

MEDICAL: Medical treatment and/or hospitalisation, if required, are provided at Tramandai or Osorio private hospitals. Serious illness will usually be treated in Porto Alegre. Dentists are also available in Tramandai. For emergency cases (injury, etc.) TEDUT first medical aid may be requested by the Master. As usual, Agent will make such arrangements.

FUEL: Not available.

FRESH WATER: Not available.

CONSTANT READINESS: Since moorings are in open roadstead, vessel's engines and gear must be ready with full power for immediate use through the period the vessel is moored and the ship must be able to clear the mooring immediately on the advice of the Mooring Master or Superintendent of the Terminal.

Whenever necessary, vessels may use their own power to prevent riding upon the SBM.

CUSTOMS REQUIREMENTS: Brazilian laws are strict with regard to smuggling and Masters are requested to instruct their crews not to retain cigarettes in carton lots, cigars, tobacco, alcoholic drinks, drugs, souvenirs, etc. These should be collected prior to arrival, listed with the items in the slop chest and placed in the custody of the Master for deposit in the chest or closet which will then be sealed for the duration of the vessel's stay at the mooring.

By no means will any commercial transactions be tolerated, be it either among terminal employees, crew members or anyone else.

CONSULATES: No consular representatives are reported to exist in the area; however, there are consulates of most maritime nations in Porto Alegre.

TIME: Local time is GMT minus three hours.

GENERAL: Lighters not available. Launch connection with shore is entirely dependent on weather conditions and must be considered unreliable.

Oil record log book should be up to date, and readily available for inspection by Government Steamship Inspectors.

PILOTAGE: To avoid a delay in obtaining a Pilot, Masters of ships bound for Strait of Canso must report by radio-telephone or radio-telegraph their estimated time of arrival to Pilots, Sydney, N.S., at least twelve hours before the vessel's ETA at the Pilot Boarding Station. The times should preferably be GMT, but whatever time is used it should be expressly stated. ETA'S must be confirmed or corrected six hours prior to arrival at the Pilot Boarding Station by radio-telephone or radio-telegraph through VCO Marine Radio Station, Sydney, or via any coast radio station.

Position for Pilot Boarding Station for the Strait of Canso is:
Northern Limit: 45° 42′ 42″ N. – 61° 29′ 12″ W. (approx.).
Southern Limit: 45° 24′ 00″ N. – 61° 01′ 00″ W. (approx.).

The pilot boat is equipped with VHF radio, watching International Channel 16 (156.8 mHz).

For vessels not yet provided with VHF equipment, portable VHF sets will be taken on board by the Pilot. There is a rental charge for this service.

Masters of calling vessels are reminded of their obligation to comply with statutory rules and are recommended to comply with international recommendations for safety of pilot ladders. If the pilot ladder is not safe, the Pilot may refuse to board and thus cause unnecessary delay to the ship.

MARINE AIDS INFORMATION CENTRE: A Marine Traffic Information Centre is being established at Eddy Point. Operating on a 24-hour basis, this centre will provide radar surveillance at Chedabucto Bay and the Strait of Canso. Masters are required to establish communication with this station when in VHF range on Channel 16, in order to provide vessel identification and obtain information regarding pilotage, buoyage, weather conditions, etc.

ANCHORAGE: There is no designated anchorage area in Chedabucto Bay but Masters are requested to anchor well clear of the buoyed route.

HEALTH: Masters arriving from a foreign port may obtain pratique by radio from "Quarantine Halifax" at least 12 hours before arrival. Information required by the quarantine officer includes:

(*b*) last port or ports of call;
(*c*) nature of cargo;
(*d*) number of crew;
(*e*) number of passengers;
(*f*) port of destination and name of Agent;
(*g*) conditions of health of all on board with details of any sickness or death occurring during the voyage.

RADIO: Masters should give their Agent a 72-hour ETA via Halifax Radio (VCS) or Sydney Radio (VCO) in local time, giving name of vessel, Master's name, size of cargo and bunker hose connections, and quantity bunkers required. When vessel is within 24 hours of Point Tupper, ETA should be confirmed or amended via the above Radio Station or direct to Point Tupper oil terminal by radio-telephone via Canso Radio Station (VAX). When vessel is within about 35 miles of the terminal, contact may be made with the terminal by VHF radio-telephone on Channel 16.

Berth No. 2 (inside) can accommodate tankers up to 50,000 dwt. Depth of water alongside 80 ft. This berth used mainly for clean products.

MOORING: Vessels will normally moor starboard side to dock. The Master should ensure that the ship is, and remains, adequately secured with sufficient ropes and wires which are properly tended and kept taut at all times. The berths are fitted with quick-release type mooring fittings for use in emergency. Tension devices on winches should not be used when metal arms or cargo hoses are connected. However, some vessels may be equipped with special or improved types of tension devices, in which case their use should be discussed with the Terminal Representative.

Ship's officers should be alert to the effects that passing traffic and the docking and undocking of ships in close proximity can have on the moorings of their own ship.

BALLAST: Vessels scheduled to load at the terminal should arrive with sufficient ballast to permit safe handling. All ballast must be pumped ashore except where a vessel is specially equipped with a clean segregated system which is reserved for ballast only. Vessels so equipped will be permitted to pump overboard after first being inspected and approved by terminal superintendent. Masters are requested to remove the blank flanges from the loading manifold before docking so as to expedite the connecting of the loading arms by shore personnel.

FRESH WATER: Fresh water, in limited quantities, is available.

FUEL: All grades of ships' bunkers are available. Bunker requirements, including quantities and specifications, should be made

known in 72-hour ETA message. Bunkers are delivered concurrent with cargo operations.
SUPPLIES: Provisions can be supplied by local ship chandlers. The supply of deck and engine stores is generally limited. Vessels are advised to notify Agent before arrival of their requirements as these may have to be obtained from Halifax. Cruising vessels with drafts too deep to berth alongside piers can anchor in harbour about 1,250/1,500 metres distance from Custom House pier where passengers may land. Ship's launches must be used for the transport of passengers to and from shore. With tug assistance vessels may berth or unberth at any time of day or night at piers Nos. 2, 3 and 4, but in adverse weather or other adverse conditions berthing at night may be prevented. Berthing and unberthing at night at other piers generally not possible.

If larger quantity to be handled vessel must berth alongside quay. In both instances ship's tackle must be used. Discharging rate for bagged cargo, i.e. flour, rice, etc. is about 30 tons per hour per hatch. In all cases vessel's derricks and winches are used. There are no lighters available, therefore as described above all cargo in excess of 10 tons must be loaded or discharged at the piers. The opening/closing of hatches is the responsibility of the crew on board, but can be done by the stevedores by arrangement with the master under the supervision and responsibility of the ship's officers.

Connections of hose couplings from water barges are 3 inch male, 11 threads per inch.
FUEL: Oil bunkering carried out ex lighter at anchorage at rate of up to 300 tons per hour dependent upon speed at which vessel can receive. Both fuel and diesel oil bunkers can be supplied at the piers. Gas oil can be supplied in drums to vessel at anchorage or in bulk ex pipe-line on piers. It is not necessary to have any Documents visaed by Chilean Consuls.

APPROACHES: Seaward approach should be made to clear all navigational dangers. The vessel should proceed until due North of Mostacilla Lighthouse, and then anchor. See "Anchorage".

The depth at the anchorage varies from 18 to 22 fathoms.

NAVIGATION AIDS: There are two diamond-shaped range markers, equipped with lights on the East shore of the harbour, and a set of range lights at the South end of the loading basin. The two diamond-shaped markers are painted red with a yellow cross. The one on the beach, about 200 ft. in from the surf line, supports a red light and the marker, 775 ft. further inland (mounted on top of a large concrete building) supports a green light. The green light at the South end of the loading basin is approximately 165 ft. South of the red light. These range markers and lights are used by the Pilot in docking and undocking vessels.

Red and green lights also mark the entrance to the loading basin, a red light on top of the ore dock structure, and a green light on the breakwater.

All these lights and markers are visible from the anchorage.

RESTRICTIONS: If advance ETA is received, ships generally will be received during daylight hours, beginning at 07.00 hours, with the following exceptions: January 1st, Good Friday, May 1st, September 18th, December 25th.

PILOTAGE: Ships calling at Cruz Grande should anchor and have a pilot's ladder (jacob's ladder) ready with a boat rope long enough to make sure the pilot boat's crew have no trouble in holding the boat in position for the Port Authorites and Pilot to board the vessel. Pilotage service for docking and undocking is compulsory.

Ship's engines must be stopped when the pilot boat approaches the vessel and must not be used again until it is clear. On sailing they must not be used from the moment the pilot boat casts off until it is clear.

ANCHORAGE: Approximately ⅓ mile due West of Point Medanitos good holding ground for all vessels anchoring is encountered. The position assures clear swing for all vessels in about 18 to 22 fathoms of water. It also assures free navigation for any vessel which may be at the ore dock.

WEATHER: South-westerly winds prevail in all seasons of the year. North breeze may be encountered in the early morning. There is seldom fog in the harbour.

RADIO: Vessels should advise ETA 7 days, 96 hours, 48 hours and 24 hours prior arrival, by radio.

It is of utmost importance that all ETA's of the vessel be given and be as exact as possible so that all officials can be advised and be on hand for receiving the ship.

Cable address is ROMERAL, LA SERENA, CHILE, and all messages having their origin in North America should be routed via Western Union and in the rest of the world via Cable and Wireless Limited. Ship's radio messages should be routed via West Coast Cables.

BULK HANDLING FACILITIES: The basin dock is located South of the anchorage. The basin is 250 ft. wide by 720 ft. long. The ore bins are located on the East side and have a capacity of 30,000 long tons. Ore is loaded through 17 spouts spaced on 20-ft. centres, and the No. 1 spout, which is the nearest thereto, is 165 ft. from the South end of the basin.

The ends of the spouts are 30 ft. horizontally from the face of the ore dock in the loading position.

MOORING: Vessels moor port side to the dock. A ship arriving at the port for the first time will be instructed by the Port Superintendent and Pilot regarding the docking and the mooring procedure.

Vessels can only be docked during daylight hours, but may undock at any hour.

A total of eight mooring bitts are available on the dock for spring lines. Stern lines are made fast to two dolphins at the North end of the basin.

At the South end, mooring bitts are anchored in concrete.

A ship must be able to handle six mooring lines independently on deck machinery. Two bow lines, two stern lines, one back spring and one fore spring are used. The bow lines and stern lines are 1¼-in. diameter wires supplied by Compania de Acero del Pacifico S.A. There are also available 1½-in. diameter spring wires for ships that are suitably equipped to handle them. If the ship does not have winches properly located to handle the latter, lines (either cables or manilas) from the ship must be used. The most satisfactory spring lines are usually 1¼-in. diameter wires with a 30-ft. nylon pendant. Two manila spring lines are used as safeties and, if there are no winches or capstans available for them, they are placed on bitts.

The ship must have available three 450 to 500 ft., 1-in. diameter manila ropes; two to be used as messengers to haul the bow lines aboard and one to haul the stern lines aboard. There must also be heaving lines to send the spring lines ashore to be placed on mooring bitts. As noted above, the Port Superintendent and Pilot will give instructions regarding the sequence of putting out the lines.

Boats will be available fore and aft to receive the messengers and make them fast to the mooring lines. The Harbour Master will be aboard the vessel during docking to instruct the boatmen.

During the time the ship is moored in the loading basin, whether loading ore or pumping ballast, all mooring lines must be kept uniformly tight so that no line is overloaded and stressed to the breaking point. In order to meet these requirements, sufficient crew members must be stationed where they can maintain the proper tension on the lines at all times and they must be under the supervision of a responsible officer.

When the required cargo has been lifted, vessels must return to the anchorage to close their hatches and finish any paper work.

Engines must be available on short notice.

Anchors are only used in emergency, but should be ready as a standby.

BALLAST: Vessels should be ballasted to meet the spout clearance requirements. In order to clear the spouts, all vessels should not exceed 56 ft. from the water-line, at which the ship is ballasted, to the highest outboard structure.

Ballast should all be discharged at the dock. The tonnage of cargo lifted must be determined by the vesel's draft as there is no other means of determining exactly the amount of cargo loaded.

Vessels are liable to fines by Maritime Authority for any oil discharged in the bay, either from tanks or from pumping bilges.

LOADING: Pier and loading facilities are privately owned and Compania de Acero del Pacifico S.A. reserves the right to moor and load vessels in the order it deems advisable.

All holds should be clean and prepared for cargo on arrival.

Any lost time through failure of compliance will be charged to vessel.

Holds will be inspected by a representative of the shipper, prior to commencement of loading.

A walkie-talkie radio will be placed on board so that the ship-to-shore or shore-to-ship communication is available at any time while the ship is waiting to load.

Loading is effected on regular work-days, but not on Sundays or holidays unless by agreement with the Shipper or Charterer and Compania de Acero del Pacifico S.A., the owner of the port.

A complete stowage plan should be delivered to the Port Supe

intendent or his representative on their boarding the vessel on arrival.

The following information is required:

Total cargo required.

Calculated tons/hold.

Draft required, foreward and aft, on completion of cargo.

Any change in tonnage of cargo required must be reported to the Port Superintendent or his representative before loading of the last 2,000 tons.

Careful check of the vessel's trim should be maintained by the Ship's Officers at all times during loading operations.

On completion of loading, the vessel shall leave the dock. Delays of port operations, including delays of other vessels waiting to berth, caused by a vessel which for any reason is not prepared and able to move from the dock when so ordered, are chargeable to the vessel which causes such delays, at the rate of $1,000 per day or pro-rata for part thereof.

FRESH WATER/FUEL: Fresh water and fuel are not available at this port, although water and diesel fuel may be obtained in nearby Coquimbo, or at Salinas, near Valparaiso. Bunker "C" type fuel can be had at Salinas also.

REPAIRS: Only in cases of extreme emergency can ship repairs be effected at this port.

MEDICAL: Medical attention may be arranged through the port Agent. No person will be attended unless he is provided with a letter from the Master, authorising such treatment. All costs incurred will be charged to the vessel.

OPENING/CLOSING HATCHES: Hatch covers that are hinged or fold in such a manner that they present a face upon which the wind can set must remain closed until the vessel is alongside and moored. Those that remain in a horizontal position when open may be opened at the anchorage providing they do not interfere in any respects with the handling of the mooring lines during docking.

CERTIFICATES: In the case of combination ore carrier/tanker type of vessel, the Master must present a gas-free certificate from an Agent acceptable to Lloyd's before notice of readiness will be accepted. Such certificates may be obtained from a Coquimbo firm and request for same should be included in the ETA message.

CONSULS: In Coquimbo, or the adjacent city of La Serena, there are consuls or consular agents for Peru, Liberia, Great Britain, Denmark and Italy.

SHORE LEAVE: Shore leave may be granted at the Master's discretion. There are no restrictions by local authorities, but men should be certain to carry their Identification Cards.

Masters are requested to have all vouchers and list of personal effects in triplicate covering the crew members remaining ashore, whether hospitalised or deserters, prepared for delivery to the Agent, prior to sailing.

A letter of authorisation is required when the port Agent is expected to provide hotel accommodations, meals, medical attention, transportation or travel expenses and/or cash advances for account of vessel.

APPROACHES: Seaward approach should be made to clear all navigational dangers. From the sea, the entrance ranges in line bearing 136·5° will lay the vessel directly to and between Point Miedo and Point Herradura, two headlands to the North and South of the bay entrance, which is 800 yards wide. The bay broadens inside to 1 mile and extends 1¼ miles in a S.E. direction.

The depth of the entrance varies between 23 to 36 fathoms, decreasing gradually to the shore. Islita, a small islet, lies a short distance off Miedo Point.

The approach to Herradura Bay is a fishing zone and caution must be maintained in navigation. Trawlers and hand-propelled craft are used.

Two diamond-shaped range marker boards, painted with diagonal stripes, are mounted on poles on the beach. With these in line, bearing should be 136·5° when coming through the entrance. Lights, foreground red with green behind, are fixed to the markers for night approach. In clear weather they are visible at approx. 5 miles.

Currents from the South and South-West tend to lay the vessel to the N.N.E. when entering the bay. There is a light at the entrance to Herradura Bay on Herradura Point.

PILOTAGE: Ships calling at Guayacan should arrive with their accommodation ladder and Jacob's ladder ready to be lowered for the Pilot. Pilotage is compulsory. Ship's engines shall be stopped when the pilot launch approaches the vessel. The pilot's launch under no circumstances will go outside the limits of the port. It is imperative that the ETA of the vessel be as exact as possible so that the Pilot and officials are on hand and may board the vessel before anchoring. The Pilot and officials must be collected and brought to Guayacan by car.

ANCHORAGE: Good holding ground for anchoring in the bay with sheltered conditions. Entering on the ranges a cross bearing may be obtained with a set of docking diamond markers and lights, bearing 094° similar to approach markers and the anchor dropped. This position assures clear swing for all vessels in about 15 fathoms and assures free navigation for any vessel which may be at the pier.

RADIO: Operators' cable address is Cap, La Serena, Chile, and all messages having their origin in North America should be routed via All America Cables, and in the rest of the world, via Cable and Wireless Limited. Ship's radio messages should be routed via I.T.T. hours out by radio.

Vessels should advise ETA 7 days, 96 hours, 48 hours and 24 hours out by radio.

BERTH DESCRIPTION: The ore pier, of steel construction with a concrete deck, is 700 ft. long and located at the North-East part of the bay. A total of 10 mooring bitts are available on the main pier, with two each on mooring dolphins to the South and North of the pier. Two twin mooring buoys, one North and one South, a distance of 350 ft. and 410 ft. from each dolphin and slightly inshore of the pier, are also available. A twin buoy to assist in docking and undocking is located 460 ft. to the West of the North end of the pier. Depth of water at the pier is 55 ft. at mean low water.

MOORING: Vessels dock port side to the pier. On approaching the pier, the starboard anchor is dropped at a position indicated by cross bearing on markers located on the shore to the North-East and at the South end of the pier and the shore. Lights are located on the markers for night docking. Nine shackles of cable are laid.

A motor launch assists in rope handling to the pier and buoys. Manila pendant lines at dolphins may be used. Sufficient deck crew must be available at all times to shift the vessel if required and to adjust moorings during loading.

Engines must be available at short notice. Permission for any major repair to the engines at the dock must be obtained from Maritime Authorities.

LOADING: In the case of combination ore carrier/tanker type of vessel, the Master must present a gas-free certificate before notice of readiness will be accepted. Such certificate may be obtained from a Coquimbo firm and request for same should be included in the 96 hours ETA message, reporting if there is or there is no tank gas detecting instrument on board.

The loading boom extends 51 ft. from the face of the pier and can be retracted 22 ft. It may be raised or lowered 18° from the horizontal when loading.

The tower is mobile with a run of 390 ft. Vessels may have to be shifted. Aft hatches should be loaded first when possible to facilitate efficient loading. When not loading the rig is parked at the centre of the pier with the boom in a vertical position inside the pier face. In the horizontal loading position the boom is 40 ft. from the water at low water level and vessels should be ballasted to ensure hatch coamings and other fixed structure at the hatches have a height less than 40 ft. above water at low-water level. Booms and other tackle should be cleared from all hatches.

Rated loading capacity is 3,000 tons per hour.

Emergency stops only are permitted on the conveyor system. Vessels on which cargo reaches coamings should note that 390 tons are on the belts between the stockpiles and the ship and this must be cleared before stopping the system.

Cargo is belt trimmed only. Hire of trimmers, if required, is for vessel's account.

On completion of loading, the vessel shall leave the pier. Delays of port operations including delays of other vessels awaiting berth, caused by a vessel which for any reason is not prepared and able to move from the pier when so ordered, are chargeable to the vessel which causes such delays, at the rate of $1,000 per day or at the demurrage rate of any other vessel that may be delayed – which ever is higher.

BALLAST: Vessels should be ballasted to meet the loading tower information given and to ensure safe handling. Wind condition can make docking of light vessels difficult. Ballast may be discharged at the pier. Upper wing tanks emptied by gravity should have covers fitted over discharges. Vessels are liable to fines by Maritime Authority for any oil or other contaminate discharged in the bay either from tanks or from pumping bilges.

MEDICAL: Medical attention may be arranged through the port Agent. No person will be attended unless he is provided with a letter from the Master authorising such treatment.

FRESH WATER/FUEL: Fresh water and fuel are not available at this port, although water and diesel fuel may be obtained in nearby Coquimbo, or at Salinas, near Valparaiso. Bunker "C" Type fuel can be had at Salinas also.

REPAIRS: Only in cases of extreme emergency can limited ship repairs be effected at this port.

CONSULS: In Coquimbo, or the adjacent city of La Serena, three

are consuls or consular agents for Peru, Liberia, Great Britain, Denmark, Italy and Sweden.

HOLIDAYS: If advance ETA is received, ships will generally be received every day with the following exceptions: 1st January; Good Friday; 1st May; 18th September; 25th December.

SHORE LEAVE: Shore leave may be granted at the Master's discretion. There are no restrictions by local authorities, but men should be certain to carry their identification cards.

SERVICES: Mail for vessel and crew should be addressed care of Compania de Acero del Pacifico, S.A.; all mail that is received for holding by the Agent will be delivered to the vessel upon arrival.

Do not have parcel post packages sent, as they must go through customs in Santiago and are delayed from two weeks to a month for their despatch.

Spare or repair parts for the vessel should be sent via air express, addressed to the ship, care of Compania de Acero del Pacifico, S.A., Coquimbo, Chile and marked ' Ship's Stores in Transit", so as to avoid paying customs duties. Information regarding the shipment should be sent to the Company via air mail correspondence.

A limited supply of provisions is available, but requests should be sent by radio 48 hours prior to arrival.

PILOTAGE: Compulsory for foreign vessels. Vessel entering from Pacific will usually embark Pilots in Valparaiso or any other nearest port. Vessels coming from the Atlantic embark Pilots in Bahia Posesion, 30 miles to the West side of the Eastern entry of Magallanes Strait. Pilot vessel is a landing craft called "Concon" which has radio-telephone frequencies of 2,182 and 2,638 ks. Four hours before arrival of the vessel, the craft keeps watch on 2,182 ks. Craft carries International Pilot lights; the hull is black and yellow with white housing. ETA at Bahia Posesion has to be given at least 24 hours in advance. In bad weather, vessel to anchor and wait in lat. 52° 17′ 5″ South, long. 69° 12′ West. Pilots usually board near the buoy of Banco Narrow and disembark off the lighthouse of Punta Delgada.
The Pilot for West-bound vessels travels to Bahia Posesion by air from Valparaiso. It is therefore important to order the Pilot through Valparaiso Agent with as much advance notice as possible, and keep Agent closely advised of vessel's ETA.

For vessels transiting Magellan Straits Westbound, the Pilot will disembark at Valparaiso. Pilot's travelling expenses from and to Valparaiso are included in pilotage charges.

PILOTAGE: Compulsory. Pilot must be waited for in position bearing 116° and 1,830 metres from Punta de Angeles Lighthouse.
ANCHORAGE: Outside the harbour and close by vessels find good anchorage in 25–15 fathoms water. It is always prudent to secure a good anchorage owing to possible strong winds during all periods of the year and causing heavy swells.

In winter, vessels anchor with one anchor with full chain and have another ready for emergencies. During winter it is not convenient to anchor near the coast due to the risk of dragging; during summer the nearer to coast, the better.

With the object of keeping clear the entrance to Valparaiso Bay and to assure a proper anchorage when arriving at this port, the Harbour Master has fixed the following anchorages according to arrival, so that vessels may proceed to berth in order of arrival.

Anchorage No.				
1	104°	True and	980 m.	from breakwater's red light.
2	099°	,,	1,400 m.	,, ,,
3	079°	,,	820 m.	,, ,,
4	083°	,,	1,220 m.	,, ,,
5	056°	,,	980 m.	,, ,,
6	066°	,,	1,340 m.	,, ,,
7	070°	,,	1,730 m.	,, ,,

9	052°	,,	1,550 m.	,, ,,
10	059°	,,	1,900 m.	,, ,,

If any vessel does not occupy the anchorage assigned, she shall be shifted by a Pilot of the Harbour Master's Office for Account of Owners.

Should the ten anchorages be occupied when vessel arrives, a provisional one shall be expressly given by the Harbour Master's Office to the vessel that requires it.

POZOS COLORADOS TERMINAL: 11.09 N. 74.15 W.

DOCUMENTS: See "Santa Marta".
LOCATION: North Coast of Colombia, approx. 6 miles South-west of Santa Marta.
MAX. SIZE: Berth in approx. 55 ft. of water and can accommodate vessels of up to 69,000 dwt. with max. draft 45 ft.
PILOTAGE: Mooring Master will meet vessels approx. 1 mile seaward of terminal location.
CLEARANCE: Port authorities board with Mooring Master to enter ship and attend all formalities.
BERTHING: Vessels lie in berth in approx. due North heading; vessel's lines run by means of mooring launch to stern, quarter, and breast buoys. Vessels up to 20,000 dwt. require at least five good manila lines; vessels in excess of 20,000 dwt. require at least seven good manila lines. These lines must be of not less than 120 fathoms length. Synthetic lines of equivalent strength may be used. Vessels equipped with wire mooring winches may use wires in lieu of fibre lines. When mooring, required use both bower anchors, each having at least 150 fathoms of chain and be prepared handle five-ton lift on starboard side at ship's manifold. Because of rigidity of submarine hose, a small movement of vessel out of correct position could damage submarine equipment. Extreme caution must be exercised to assure that vessel is correctly moored. During loading operation slack must be kept out of submarine hose by adjustment of vessel's anchor and lines.
HOSES: Submarine hose 16 in. with 16 to 12 in. reducer for connection to vessel's 12 in. deck hose. For vessels not equipped with 12 in. deck hose, a 12 to 10 in. reducer is available. A 25 ft. length of 10 in. deck hose is also available for vessels not having a deck hose on board. Ship's crew performs all hose connecting, disconnecting, etc.
CARGO HANDLING: Rio Zulia Crude Oil has following specifications: Gravity, approx. 41·2° API. Flash, below atmospheric temperature. Reid vapour pressure, 5 to 8 PSI. Pour point, +85°F. Sulphur, wt. %, 0·3. Wax, wt. %, 16.

Rio Zulia Crude has high wax content (about 16% by weight). Above 90°F. Rio Zulia Crude will flow easily and is about same viscosity as heavy No. 2 oil. Below 90°F. it rapidly becomes more viscous until it is similar to petroleum jelly or heavy lubricating grease.

Temperatures: Loading temperature of this cargo at Pozos Colorados between 85 and 90°F. Vessel should maintain loading temperature in wing tanks or if necessary gradually raise temperature to approximately 85° to 90°F. Approx. 2 to 3 days prior arrival discharge port, vessel should start to heat cargo in centre tanks so that upon arrival discharge terminal, average cargo temperature is between 100° and 105°F. for both wing and centre tanks. This temperature should be maintained throughout discharge. When discharge is through a submarine line in cold waters or over docks, when ambient temperatures are extremely cold, it is recommended that above temperature be increased 5° to 110°F.

Tank preparation: Cargo tanks which on previous voyage contained sour crudes (similar to those loaded in Arabian Gulf) should be machine washed with hot water at maximum pressure order remove from tank bottoms all free oil remaining from previous voyage. Machines should be spotted low in tanks so as obtain maximum washing over tank bottoms. Upon completion of deballasting, cargo tanks should be stripped dry and cargo pumps and lines drained so that tanks, pumps and lines free of pumpable water when cargo loaded into them.

Cargo discharging: When discharging Rio Zulia Crude, each cargo system should be discharged by main cargo pump directly connected to that system and forward tank on each system should be discharged first. Operations should then work aft with tanks on each system being discharged in rotation. This will keep vessel trimmed by stern throughout discharge and keep tanks being stripped draining to suction lines. This will also permit stripping operations to be carried out while main cargo pumps are discharging cargo in remaining tanks.

By discharging cargo tanks as recommended above, cargo loss resulting from crude congealing on bottom surfaces will be minimised. Each tank should be discharged as quickly as possible using main cargo pump, then stripped as well as possible. About 20 minutes after stripping each tank should be stripped again. Then in about 20 minutes each tank should again be stripped. During discharge of each tank, cargo heating coils should be left on until completion of stripping operation. When initial stripping operation is started, steam-to-steam heating coils should be reduced sufficiently so that cargo temperature will not rise above 120°F. If cargo temperature rises much above 120°F., there is danger that stripping pumps will become vapour locked.

Cuba

ANTILLA (and sub-ports of Felton, Nicaro and Preston) 20.50 N. 75.44 W.

Port situated on north side of Nipe Bay, on North Coast of Cuba.
APPROACHES: Safe approach without sharp turns. Width of approach about ¾ mile with mud bottom. Depth of water between entrance and Saetia anchorage about 150 ft.
PILOTAGE: Pilots board vessels proceeding to Antilla Port or to sub-ports of Preston, Nicaro and Felton, one mile North East of Punta Mayari Lighthouse.
All vessels proceeding to Antilla or to sub-ports must proceed to a position no more than one mile North of the Line E/W with Punta Mayari.
Lighthouse position: 20° 47′ 45″ N. 75° 32′ 00″ W.
Pilot station is at Saetia. There is a telephonic communication between Antilla and Saetia, though rather deficient. On many occasions it is impossible to communicate with Pilots when there is any sudden change in vessel's ETA. Therefore advise Antilla Agency soonest of any change in ETA.
Distance from position where Pilots board vessels to Antilla Piers is about 15 miles.
ANCHORAGES: Corojal, 14 miles. Can accommodate vessels drawing up to 20 ft. with a length up to 557 ft. Sufficient swinging area.
Punta Salinas, 10 miles. Can accommodate vessels drawing up to 31 ft. without length limitation.
Preston, 7 miles. Can accommodate vessels drawing up to 30 ft. without length limitation. Swinging area unlimited.
Saetia, 3 miles. Can accommodate vessels of any length and draft.
Cajimaya, 6 miles. Can accommodate vessels drawing up to 32 ft. with length up to 600/700 ft.
La Chiva, 5 miles. Can accommodate vessels of any length and draft.
RESTRICTIONS: Vessels can enter/sail only during daylight hours.
MAX. SIZE: Vessels of any length and draft can enter Antilla but only up to Saetia anchorage, where the mouth is about ¾ miles wide with a depth of 150 ft.
Vessels must not enter or sail from this port with a draft more than 20 ft. forward, 23 ft. aft, as depth at piers limit draft either entering or sailing.
Length is limited by length of piers to 450 ft., otherwise one hatch would remain outside pier, which would result in delay loading or discharging.
There is an average of 3 ft. between high and low tides.
CLEARANCE: All Port Authorities, Port Doctor, Customs, Immigration and Captain of the Port have their offices at Antilla. Vessels may proceed directly to sub-ports without entering Antilla for clearance. Port Authorities clear ships at subport when necessary.
Launch service is the preferable means of transportation used by the Port Authorities to the various sub-ports under Antilla jurisdiction.
There are Custom House Delegations at sub-ports of Preston, Nicaro, but no Immigration. The Custom House Delegate at the sub-port of Nicaro also acts as Delegate for the Captain of the Port.
Although there is no Port Doctor Delegate at the sub-ports, the General Hospital Doctors may act as such, if requested, in order to give a quick entry to the ship.
Notwithstanding the above, in those cases when a ship is coming from a Cuban or foreign port, destined to Nicaro, and happens to lose the slack water tide, it will be necessary for the ship to anchor at Saetia (Antilla) and to wait the next tide. In these particular cases the Port Authorities give entry to the ship at Saetia anchorage, and

it is not necessary for another Port Authority visit at the sub-port of Nicaro.

RADIO: When vessels proceed to Antilla, or to any sub-ports, Preston, Nicaro or Felton, or to the port of Banes, ETA messages should be sent to "Mambisas Antilla", simultaneously advising the main office, "Mambisas", Havana.

Ships can communicate with Mambisas Antilla's Agency by wireless via CLA.

TUGS: No tug is required for entry to Antilla. There is a tug available 24 hours of the day, but service must be requested at least 24 hours in advance. Name, Macabi; length, 81 ft. 1 in.; width, 24 ft. 0 in.; gross tonnage, 183·53; net tonnage, 86·00; motor, one diesel; h.p., 750; speed, 8½ knots.

BERTHING: Pier No. 4 (north side). Length 458 ft. Can accommodate vessels drawing up to 17 ft. forward, 23 ft. aft, with a length up to 557 ft.

Pier No. 4 (south side). Length 458 ft. Can accommodate vessels drawing up to 20 ft. forward, 23 ft. aft, with a length up to 557 ft.

Coast Pier: Can accommodate vessels drawing up to 20 ft. even keel.

At these piers, operations of loading sugar and discharge of jute bags. Shipment of molasses can only be performed at No. 4 pier (north and south side) where there is a pipe-line of 16 in. diameter.

The three piers have railroad tracks of standard guage. Each pier is connected with one railway which is independent of the others, but has no separate outlet at the end of the piers; consequently to perform any movement it is necessary to take out the remaining cars.

Operations at anchor in the bay cannot be performed, as there are no lighters or tugboats available.

STEVEDORES: Working periods – loading sugar: Monday to Friday – 0700/1100–1300/1700. Saturday – 0700/1100–1300/1700. Sunday – no work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Capacity: Three ships can be performing sugar loading operations simultaneously, although the labour force available is for a total of 12 gangs.

1. Raw Sugar: (*a*) Loading rate: 1,330 bags of raw sugar (of the 220-pound type) per four hours per gang. (*b*) Bags per sling: 6 bags of raw sugar (of the 220-pound type).

2. Refined Sugar: (*a*) Loading rate: 2,100 bags of refined sugar (of the 100-pound type) per four hours per gang. (*b*) Bags per sling: 12 bags of refined sugar (of the 100-pound type).

No shore crane available at this port, but there are six machine throwers for bulk sugar operations, grates and canvas funnel, etc. These machines function with diesel motors.

Sugar bags are opened in the square of the hatch.

TANKERS: Molasses pumping rate is at an average of 35,000 gallons per hour.

Coast dock has been equipped by ECP for vessels to discharge gasoline and gas oil and where vessels can berth with draft 20 ft. even keel. Fidelity tanks, presently operated by ECP, one for storing gasoline and the other for gas oil.

Capacity of each tank about 53,000 barrels. Average discharging rate, each product about 300 tons per hour.

Due to the fact that there is only one pipe-line, when vessels carry both products gasoline is discharged first, after which the pipe-line is cleaned by pumping water. The gas oil is then discharged.

MEDICAL: There is a hospital where crew members may be hospitalised.

FRESH WATER: Can be obtained. The water is brought from outside in railroad tank cars and pumped to the ship by means of a portable turbine. Any amount of water can be delivered but only in partial quantiies of not more than 2 tank cars daily. Average delivery: 30 tons per hour.

FUEL: Not available.

REPAIRS: Minor repairs only.

AGENTS: Attending the port of Antilla, and the sub-ports of Preston, Nicaro and Felton, also the port of Banes.

Agency Address: Empresa Consignatarias Mambisas, 55 Avenue de Cuba, PO Box 62, Antilla, Oriente, Cuba. Cables: "Mambisas" – Antilla. Tel. 39. Night No. 247.

Crew mail should be sent to Antilla Agency address, even when ships are operating in sub-ports, and sent by "Registered Mail" for quick delivery. Letters of instructions or cables from owners should be sent to the main office: "Mambisas", Havana.

SUB-PORTS:

Distance from Antilla to:

Preston (Guatemala), 7 miles.

Felton, 11 miles.

Nicaro, 14 miles.

To the port of Banes, which is attended by Antilla Agency, 50 kilometres. From Antilla to Banes highway transportation is used.

Time from Antilla to:

Sub-port	*Launch*	*Highway*
Preston	1 hour	1 hour 45 minutes
Felton	1 hour 30 minutes	2 hours 15 minutes
Nicaro	2 hours	3 hours

There is only a regular launch service from Antilla to Nicaro, leaving daily from Coastwise pier Antilla at 0930 hours, arriving Nicaro at 1130 hours.

(*a*) **SUB-PORT OF PRESTON (GUATEMALA):**

LOCATION: On North coast of Cuba, 20° 46′ N. 75° 40′ W.

This sub-port situated Eastern side of Nipe Bay on a peninsula called Punta de Tabaco, South East of Antilla. Sugar and molasses produced by the sugar mill Preston (Guatemala) are shipped through this sub-port.

APPROACHES: Same as for Antilla – (Nipe Bay) where Preston is located. The depth from the entrance to anchorage at Preston of about 150 ft., gradually decreases to 60 ft.

PILOTAGE: See "Antilla". Distance from the point where Pilots board the vessels and Preston Pier: 8 miles; to Preston anchorage: 7 miles.

ANCHORAGE/RESTRICTIONS: See "Antilla".

MAX. SIZE: It is not necessary for ships to wait for slack or favourable tide. At sub-port of Preston, ships cannot enter or sail with a draft exceeding 11 ft. forward, 20 ft. aft, as pier is continuously losing depth due to the quantity of mud that Mayari River deposits.

CLEARANCE: See "Antilla". Port Doctor, Immigration and Port Captain travel from Antilla to Preston to give ships entry. Custom Delegation at this sub-port, only occasionally, and in order to avoid delay Preston Hospital Doctor clears the ship.

Vessel can proceed directly to this sub-port, since Port Authorities come from Antilla to give ship's entry.

RADIO: See "Antilla".

TUGS: See "Antilla". No tug required for ships to enter this sub-port. No tug available, but can be obtained from Antilla.

BERTHING: Wooden Pier (West side only) where vessels can be accommodated drawing up to 11 ft. forward and 20 ft. aft. This dock has about 1,100 ft. length, but the first 600 ft. (starting from shore to the head) is only about 12 ft. depth; from there on, draft for loading is 11 ft. forward and 20 ft aft..

Only one vessel can be berthed at this pier on West side. It is usually used only in loading sugar and molasses, and occasionally for discharging coastwise fuel oil for sugar mill consumption.

The pier has double railroad track of standard gauge which reaches to its end, but for performing any movement it is necessary to take out the remaining cars as there is no outlet at the pier's end.

No dry cargo discharging is carried out, and no cargo operations are conducted in the bay.

STEVEDORES: Loading sugar – working period (maximum 4 gangs). Monday to Friday: 0700/1100–1300/1700. Saturday: 0700/1100–1300/1700. Sunday: No work is performed.

General cargo: No discharging operation is performed at this port.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Raw sugar-loading rate. About 1,330 bags of raw sugar (of the 220-pound type) per four hours per gang.

Bags per sling: 6 bags of raw sugar (of the 220-pound type).

Operational capacity. At this sub-port only one vessel at a time can be operated.

Refined sugar. No refined sugar has been shipped by this sub-port.

Equipment. There is one movable shore crane available with lifting capacity of about 60 tons with 75° boom inclination. Boom length 50 ft. Crane is mounted on a railroad flat car which is acted by means of steam supplied by an adapted boiler. As the greater part of the year this crane remains idle, it is possible that its lifting capacity might have decreased. Five grates, but no thrower machines.

TANKERS: Molasses pumping rate average of 75,000 gallons per hour.

MEDICAL: There is a hospital at Preston which offers very good service to ship's crew. In cases requiring special attention, patients can be taken to Holguin, where there are reliable specialists.

FRESH WATER: Can be supplied to vessels. Pier has a 2-in. diameter pipe-line, through which water is delivered directly to ship, at an average of about 30 tons per hour. Any quantity of water can be supplied.

FUEL: Not available.

REPAIRS: A good repair shop operated by the sugar mill "Central Guatemala".

AGENTS: See "Antilla".

(*b*) **SUB-PORT OF NICARO (LENGUA DE PAJARO) LEVISA BAY:**

LOCATION: North Coast of Cuba in province of Oriente, 19° 43′ N. 75° 33 W.

APPROACHES: Entrance channel for sub-port of Nicaro is risky for vessels over 350 ft. length, due to its narrowness and because of having sharp turns, some of them forming angles of almost 90°. Bottom and banks are rock and coral.

Depths – 170 and 78 ft. maximum/minimum, respectively. Vessels exceeding 350 ft. length require tug for entering and sailing; all vessels over 450 ft. must be extremely careful. Entering or sailing must be effected during slack water, high or low. Simultaneous entry or sailing of two or more vessels is not permitted.

PILOTAGE: See "Antilla". Distance from the point where Pilot boards vessel and Nicaro anchorage, about 10.50 miles; to Nicaro Pier, about 11 miles.

ANCHORAGE: Can accommodate vessels with length up to 475 ft. and maximum draft up to 30 ft. The swinging area is limited to 800 ft. to permit access through the channel.

RESTRICTIONS: At sub-port of Nicaro, vessels not permitted enter or sail during night time. From beginning May until end August vessels can enter Nicaro from 0515 hours to 1800 hours, and sail from 0550 hours to 1840 hours. From end August to beginning May,

vessels can enter from 0615 hours to 1720 hours. For sailing from 0620 hours to 1810 hours.

In the above information, the time taken (1 hour, 20 minutes) to undock from pier and manoeuvre to entrance of channel, and vice versa, has been included.

MAX. SIZE: Permissible draft at North side of Nicaro pier at low tide must not exceed 27 ft. 6 in. forward and 29 ft. aft, with max. length not over 476 ft.

South side of Nicaro Pier, at low tide, has depth of 25 ft. towards shore and 28 ft. at its end, showing the marks for 26 ft. at a distance of 450 ft. from head of pier up to its end.

Both sides have muddy bottom about 3 ft. deep. Nicaro was dredged up to 32 ft., not having been dredged since that time. As a consequence of unloading of mineral (anthracite) which is carried out in this sub-port, anthracite can be discharged only at South side of pier, where crane is situated; a great quantity of mineral is deposited on the bottom, mainly close to piling which supports the pier plate. Owing to this, it is believed that there is an elevation of mud and coal which extends alongside of pier from the 50 ft. mark to 380 ft.

Because of this elevation, which forms an incline from stack pile of the pier, up to approximately 1½ metres out, vessels which submerge more than 26 ft. forward and 27 ft. aft tend to list to port.

Between months of August and December, variation of tide is from 3 ft. to 3·5 ft. During remaining months it is from 2·5 ft. up to 3 ft.

Also see "Approaches" and "Anchorage".

CLEARANCE: Vessels are cleared by a doctor of the Nicaro General Hospital. Immigration officials come from Antilla together with the Agent and Customs Inspectors.

Vessels proceeding to Nicaro can do so directly without having to call Antilla for Port Authorities' Clearance.

Vessels unable to proceed direct owing to unfavourable tide or night arrival are required to anchor at Saetia or Salinas. In such cases, and when ordered by the Chief Inspector, clearance on entry is carried out at these anchorages.

RADIO: Nicaro has following means of communication: telephone, post office, telegraph and radiograms via R.C.A. Ships can communicate with Nicaro using C.L.A., but it is suggested that ETA messages be sent simultaneously to Mambisas, Antilla, and Mambisas, Havana.

Also see "Antilla".

TUGS: Obtained from port of Antilla. Therefore it is recommended that when vessels are assigned to this sub-port, advice of their ETA be given with sufficient time prior to vessels' arrival. Particulars of tugboats are shown under "Antilla" information.

BERTHING: Nicaro Pier operated by Empresa Consolidada Nickel Industria Minera "Commandante Rene Ramos Latour", where following operations carried out: Sugar loading from mills Guatemala and Nicaragua; shipment of nickel; and also discharging general cargo, fuel, oil, ammonia and coal.

At North side of pier are two intakes for fuel, oil, one for ammonia and one for gas oil.

Liquid fuel can be discharged at South side of pier, but this operation prohibits any other operation being carried out at opposite side of pier, as hoses have to cross over pier from the vessel to connections situated at North side.

Pier has a railroad track of standard gauge. Truck transportation can also be used. Interruptions are experienced (mainly sugar loading) since there is only one railroad track. Operation of change and movement of flat cars takes approximately 10 minutes.

In discharging mineral coal, no interruptions occur and time is not lost.

Electric shore crane is installed at South side of pier and mounted on rails which run from one end to the other. The top end of this crane consists of a rotary structure from which is projected a boom about 50 ft. long. This boom can be suspended up to an angle of about 60°. In a horizontal position, it can lift weights of about 10 tons each and the loading capacity is gradually increased to 20 tons while raising the boom up to an angle of 45°.

Crane can also perform discharging operations on vessels which are docked on the North side, but operations are slower than when vessels are docked at South side.

Crane's accessories consist of two grabs for mineral coal of 1½ and 3 tons capacity each, steel slings, special slings for loading nickel, etc. This equipment (excluding ship's tackle) is the only gear available for loading or discharging at this sub-port.

Only two vessels can be loaded simultaneously, and operations of working two vessels simultaneously delays both operations owing to characteristics of this pier, which was constructed specifically for receiving mineral coal, general cargo, fuel, oil, ammonia, and to ship nickel or other type of heavy material. Pier lacks necessary railroad tracks to ship sugar as are found in other ports which have been assigned to this purpose.

No cargo operations are carried out in the bay.

STEVEDORES: Loading or unloading of general cargo, nickel, mineral coal, etc., is performed by port workmen of sub-port of Nicaro.

Raw sugar-loading rate. At present, average loading rate in a period of 4 hours per gang, is about 1,330 bags.

Bags per sling (Guatemala sugar): 6 bags of raw sugar (of 220-pound type) per sling. Nicaragua sugar: 6 bags of raw sugar (of 220-pound type per sling. Sugar bags from sugar mills Guatemala and Nicaragua are transported from respective mills to Nicaro in railroad flat cars, already slinged.

Refined sugar. No refined sugar is exported.

General cargo discharging rate. General cargo of a fragile nature and careful handling: about 5 tons per gang hour. General cargo of sturdy nature and easy handling: about 20 tons per gang hour.

REPAIRS: Sugar mill repair shop for minor repairs. Welder available.
COMMUNICATIONS: Long-distance telephone communication between Manati and Puerto Padre, although difficult owing to fact that there are only two lines from Manati and they are almost always congested. There are some occasions when an entire day is spent trying to obtain communication without result. Victoria de las Tunas telephone operator serves on occasions as "relay".

Vessels cannot communicate by radio with this port.
AUTHORITIES: Port Doctor and Port Captain located at this port. Custom House delegation located here, also Immigration Inspector who attends Gibara, Vita and Puerto Padre. PILOTAGE: Compulsory. Boards incoming vessels about one mile from the dock. (The Pilot's working hours from 8.00 a.m. to 12.00 noon, 2.00 p.m. to 5.00 p.m.; a fee charged after working hours. A fee is also charged for movements in harbour.) Ships will be received Saturdays and Sundays and at night for the same rate for the Pilot.

ANCHORAGE: Vessels that cannot be docked on arrival will find safe anchorage to the East of the dock where there is plenty of swinging room, in about 20 fathoms of water, with good holding ground of mud and sand.

APPROACHES: Coast Guard Service recommend that a ship, entering Manzanillo Bay from the East, should stay well out until it has rounded shoals surrounding Seven Brothers Islands. At approximately 19° 58′ West longitude, a course of 127° will bring it into the bay near the wharf. A ship arriving from the West should stay about six miles off Cape Haitian Light. When abreast the light a course of 111° will lead into the Bay a short distance North of the pier.

RADIO: Radio Station HIL31. This station is private and for the use of Grenada Co. only. Messages of ETA, etc. from vessels should be sent via Miami WAX or New Orleans Radio WNU.

Vessels bound for Manzanillo, should radio their ETA to Santo Domingo Pilot Station daily, from 0600 to 1800 hours on frequency 2738 and 2182.

Vessels having single sideband equipment may also contact radio Instituto Agriario Dominicano at Manzanillo, at wavelength 26·70 and 26·38 kHz from 0700 to 1200 and 1400 to 1700 hours EST.

TUGS: No heavy duty tugs available but there is a launch for the handling of ship lines.

BERTHING: Prevailing winds are Easterly and sometimes interfere with docking or undocking. On the East side vessels should dock bow in, since there is not enough room to swing vessels safely around for a port docking. On the West side vessels can dock either side to the pier, depending on the direction and force of the wind. In general banana vessels will be docked on West side of the pier and cargo vessels on the East side. Pier has a concrete deck 744 ft. long, 72 ft. wide. Both sides of the pier are protected with a pine fender system. The water depth at land end of pier is 10 ft. and at the seaward end 60 ft.

The end of each pipe-line is marked by a metallic buoy, the cargo hoses for No. 1 and No. 2 pipe-lines are connected by separate chain to a "Spreader" which by single chain is attached to a metallic marker buoy. On the "Spreader" there is marked, by welding, *1 and *11 where the chains are attached, indicating what pipe-line they are connected to. Ship's crew is used in connecting and disconnecting cargo hoses.

Vessels should moor only on high water during daylight hours; however, they may unmoor day or night. Launch available for mooring and running lines. PILOTAGE: Compulsory for vessels over 60 metres length. Vessels can communicate with pilot station, tel. 31.36.08, through Boulogne Radio. When pilot launch is at sea, contact by VHF Channel 12.

The most favourable boarding point is between the sea buoy and the wreck buoy situated 1½ miles to the South, or slightly nearer the land if there are strong Westerly winds. In any event, the surf created by the Carnot breakwater must be avoided by keeping at least 1 mile off shore. If Pilot is not immediately available, vessel must wait in Outer Roads, if necessary at anchor, until further instructions received. On no account should vessel attempt to enter Carnot Roads without Pilot.

ANCHORAGE: The outer anchorage for large vessels is midway between Bassure de Baas and the Carnot breakwater. Anchorage prohibited in the main approach channel.

However, the characteristics of the inner port can just accommodate ships up to a maximum length of 130 metres with a draft of 4·50 metres. Plans are being studied for considerably improving these facilities.
DEVELOPMENTS: Lengthening of the Quay de L'Europe which will then have a total length in excess of 800 metres.

A third roll-on/roll-off position is being studied which will be located in the sheltered roadstead, on the Western side of the Sarraz Bournet mole, and will be able to handle a mixed traffic of accompanied cars and general cargo. In addition, a quayside installation equipped with a ramp is being planned in the dock for berthing Ro-Ro ships with both horizontal and vertical handling capability.

A 240-metre quay may also be available along the Western side of the quay when the increased traffic warrants its construction.
FRESH WATER: Supplied by pipe-line to all berths.
FUEL: SMCL quay can supply marine fuel. Quay is limited to vessels less than 100 m. length and 5 m. draft, otherwise fuel obtainable by tanker lorry from Dunkirk.

The message will be sent through radio stations of: Boulogne-radio/FFB (working frequencies 1771 kHz and 2747 kHz) or Brest le-Conquet radio/FFU (1806/2726 kHz).

It will give the date and time GMT of ETA, and the maximum draft. It will be sent about 12 hours before arrival and corrected by another message if necessary. This service is free. Same stations of Boulogne and Brest to be used to contact Agent and in addition Saint Lys/FFL.

FUEL: All grades available, viscosities from 200 sec. to 3000 sec. Redwood. Minimum 48 hours advance notice required to prepare barges.

FIRE PRECAUTIONS: Dangerous cargo must be declared on "Inbound Bill" and in order not to delay vessel's entry it is highly recommended to inform Agent of quantity and exact nature of dangerous cargo on board 48 hours prior to arrival, thus enabling agent to get in touch with Harbour Master and take necessary steps which may go from a single smoking prohibition up to a fire-picket on the quay during all the call.

OPENING/CLOSING HATCHES: May be done by stevedores at the same price as shifting of cargo depending upon the type of cargo and consequent number of men included in the gang.

It is highly recommended to carry out opening by the crew before beginning of shift to avoid both loss of time and expensive charges and also risk of accident to stevedores who are sometimes not well aware of vessel's closing system.

It is emphasised that for reefer cargo stevedores wait for cold exhaust half an hour after opening hatches before getting down in

the holds. Consequently it is strongly advised to stop ventilation and start opening hatches with crew about one hour before beginning of shift keeping in mind that for reefer cargo, the morning shift may commence at 05.00.

Vessel should come as near as possible to the entrance. Vessels are anchored at the port entrance, or in the river, and await the tide, or proceed directly to the port.

In case of bad weather, when the Pilot may not embark, vessel to follow the pilot launch on the bearing 346° up to Plage du Trez, where boarding is possible. Vessels at anchor awaiting Pilot should get under way to approach the pilot boat on the bearing 346° when they see the launch approaching.

PILOTAGE: Vessels proceeding to the ports of Rouen and Honfleur are met by pilot boat on La Carosse Roads (Rade de La Carosse). Pilotage is compulsory between the mouth of the Seine and Rouen for all vessels of 55 metres length and over; each vessel taking a Pilot for the downriver stage between La Carosse Roads and Villequier, or vice-versa, and a Pilot for the upriver stage between Villequier and Rouen, or vice-versa.

The following signals should be made for summoning a pilot on La Carosse Roads: By Day: flag G of the international code of signals. By Night: in morse by signalling lamp. Failing this, the vessel should hoist her national ensign at the foremasthead.

The following additional signals can be made when arriving on La Carosse Roads: By Day: hoisting a ball or the national ensign at the foremasthead. By Night: a red light from the mainmasthead. At Any Time: by the sound signals of 5 prolonged blasts (– – – – –).

Vessels leaving harbour or shifting berth should apply for a Pilot to the Pilotage office, 18 rue Duguay-Trouin, Rouen (tel. 71–68–50).

The Rouen pilot boat keeps a telegraphic and telephonic watch during the following period of all tides: from 1 hour after low water Le Havre until 4½ hours after high water (middle point stay tide). The watch is kept in the following manner: 1. Telegraphy: 50 kHz (600 m.) call sign FORI. 2. Telephony: 2·182 kHz (137·50) m.) frequency modulation (VHF) 156·8 mHz, Channel 16 call sign Pilot Rouen.

Since the pilot boat's watch is not permanent, Masters wishing to enter into direct contact with her are recommended to signal their position during the high water prior to that by which the vessel expects to enter the roads.

RESTRICTIONS: The height of water above chart datum at Le Havre is broadcast on Channel 11 every 10 minutes by Honfleur VHF port radar station starting 2½ hours before, until 4 hours after the initial point of stay tide.

PORT RADAR: The radar station at the extreme end of the eastern jetty of Honfleur can, on request, inform vessels of their position in the estuary, aiding in particular those vessels unequipped with radar and running into fog. Working hours and R/T frequencies are the same as those indicated above for the transmission of water heights.

A radar post situated at kilometric point 334.400 on the right bank at Radicatel operates, experimentally, as an aid to navigation between the Risle and the Aizier from two hours before until two hours after high water Le Havre.

To obtain information put out a VHF call on Channel 16 (156·800 mHz) and then switch to channel 9 (156·450 mHz).

Information given by the port's Radicatel radar post and the Honfleur works radar, at ship's option, is extended as an aid only and implies no responsibility either to the Port Authority or its agents in any subsequent recourse to such information, which is given free of charge.

ANCHORAGE: In the outer roads at La Carosse.

MAX. SIZE: Vessels over 216 metres length have entered. Draft approximately 2·40 metres more than height of tide at Havre. Maximum about 33 ft.

RADIO: Vessels are obliged to give their ETA and draft at least 5 hours before arrival to Rouen Information Centre via Brest – Le Conquet Radio or Boulogne Radio. Failure to do so may result in a fine. Port operations can be contacted by VHF as follows: below Tancarville, call Le Havre radio on Channels 26 or 23. Above Tancarville, call Rouen radio on Channels 25 or 21. Vessels should keep watch on Channel 16 for information from Havre or Rouen radios, and keep this channel free for incoming calls.

TUGS: Permanently available in the port of Rouen. Tug assistance in the River Seine is available on request.

BERTHING: The main Maritime Port of Rouen extends from the Guillaume le Conquerant bridge as far as La Bouille over a distance of 11 miles. Quays and wharves cover the length of both banks of the Seine. There are also five basins in direct connection with the river without the interposition of any locks;

On the Right Bank: St-Gervais docks; on the Left Bank: the Timber dock, the Rouen-Quevilly dock, the Floating Docks tidal basin, and the "Bassin aux hydrocarbures" at Petit-Couronne.

The extent of quayage in the Maritime Port is 32,900 ft., and in the river docks 5,900 ft.

Skaramanga Yard's three floating docks have been designed in such a way as to eliminate delays of any kind in the raising of large vessels and to ensure that the work is carried out in minimum time and with the least possible inconvenience to the crew living on board.

The basic equipment of the docks is the following: Two 5-ton cranes, two fire extinguishing pumps 120 m³/h at 90 m. WC, DC current supply to ships 1200 A 220 V, AC current supply to ships 600 A 440 V 60 cycles, multipoint welding rectifier 2500 A, two oil pumps for supply of fuel oil from the dock to the vessel 60 m³/h at 50 m., two compressors 17 m³/min. at 7 atü, emergency diesel generator set 200 KVA, foam fire extinguishing system, steam boiler and water distilling plants.

Graving Dock

The Graving Dock is 327 m. (1,100 ft.) long, 53.6 m. (176 ft.) wide and 9.25 m. (30ft.) deep at the entrance. It can take ships in the 240,000 ton range.

Ships are manoeuvred at the dock entrance with the assistance of two 5-ton capstans situated on each side of the entrance gate. They are then shifted inside the dock by two 15-ton auto-tensioning win-

ches and hauling-in trolleys (mules) running on tracks on each side along the dock subway.

The dock floor is fitted with specially designed keel blocks for easy fitting and removal and with electricity operated side blocks.

The Graving Dock is served by two 100-ton cranes, one 50-ton crane and a small 5-ton crane.

A fleet of five powerful tugs is on hand at Skaramanga Yard to assist docking and undocking operations of all vessels calling at the yard.

Eleusis Shipyards S.A. is locate d27 km. outside Athens. The site was chosen on account of the several advantages it presents. The bay is well protected from strong winds, sources of raw materials are available in the vicinity of the yard, and adequate transportation, power, and relecommunication facilities can service the needs of yard.

Haiti

CAP HAITIEN: 19.46 N. 72.12 W.

GENERAL: For all general information refer to "Port-au-Prince".
APPROACHES: The current is about 3 knots in the entrance to the port when the river is in flood.
ANCHORAGE: Vessels which are unable to moor alongside because of deeper draft are anchored off the wharf.
BERTHING: The wharf at Cap Haitien was constructed by the Compania Industrial Maritima. The construction is in reinforced concrete. It extends for a length of 900 ft. in an Easterly direction and comprises three sections. The most important section is 600 ft. long and has berths for deep sea vessels on the South side in depths of 20 ft. The Western section, nearest the shore, is 300 ft. long with variable depths of 7 to 9 ft. alongside, with berths for motor vessels of small tonnage and sailing ships. The central section accommodates the customs offices. Two metal warehouses border the East and West ends of the wharf. Between the warehouses is one fixed crane of 30 tons capacity.
FRESH WATER: Fresh water is available at Cap Haitien.
FUEL: Not available.

MIRAGOANE: 18.25 N. 73.04 W.

GENERAL: For all general information refer to "Port-au-Prince".
BERTHING: The facilities at Miragoane are one small jetty for loading and discharging general cargo with a depth alongside of 18 ft. maximum.

There is a wharf for loading bauxite, belonging to the Reynolds Company, with a depth alongside of 34 ft. Total annual export about 350,000 tons.

PORT-AU-PRINCE: 18.33 N. 72.21 W.

APPROACHES: The port of Port-au-Prince is situated at the extreme South-east of the bay. It can be approached from the North and from the South by two channels.

One may approach from the North-east by the Saint-Marc channel or from the West by the Gonave channel, between Trou-Forban Point and the village of Ca-Ira. The bay extends between Trou-Forban Point in the North and the village of Ca-Ira about 20 miles to the South. The position of Ca-Ira is 18° 32′ N. 72° 39′ W. From Ca-Ira the South coast of the bay extends about 2 miles North-east and about 12 miles East to Pointe Lamentin.
PILOTAGE: Pilotage is compulsory for all movements of ships in the port. The Pilot boards to the West of the fairway buoy and is accompanied by port officials, i.e. Port Doctor and Representatives of Immigration, Police and Customs. These officials insist on using the accommodation ladder to board the vessel. Masters must arrange with their respective Agents the time which they will require a Pilot to leave the port. If they are ready to depart before the hour arranged they may call the Pilot by three blasts of the ship's whistle.
ANCHORAGE: Vessels must anchor to the West of the large red buoy number 29 or at the quarantine buoy, situated about $\frac{1}{2}$-mile N.N.W. of buoy number 29. A bottom of sand over coral is to be found all over this region in depths of 10 to 18 fathoms.

Vessels may anchor or depart at any hour of the day or night.

In order to facilitate the rapid movement of vessels, these are normally anchored in order of arrival.
WEATHER: The bay of Port-au-Prince is nearly always calm except at certain times of the year; for example, during the months from May to November, occasional strong winds may interrupt normal loading and discharging movements.

A light breeze from the East or North-east blows after dawn, but in the afternoon a breeze three times stronger blows in the opposite direction.

The height of tide is only $1\frac{1}{2}$ ft. Currents in the port are almost negligible, except that, when mooring or unmooring a vessel, one should pay attention to a Northerly current of about $\frac{1}{4}$ of a knot.
RADIO: All deep-sea vessels which enter the territorial waters of Haiti are obliged to advise the Port Radio Station.

The radio station is situated at the Bureau de Port. It is in operation 24 hours a day.

Visual light signalling may also be carried out as far as it is possible to do this.

The following apparatus is used at the radio station:

1. VHF Channels 11, 12, 13, 14 and 16, power 50 watts, range 40 miles.
2. Medium frequency "Pearce-Simpson" amplitude moderation, frequencies 2,182 kc s., 2,738 kc s., power 85 watts, range about 200 miles.

In addition to the VHF Channels, the Pilots may use radio-telephone on the following frequencies:

2.182 kc s., 2,638 kc s., 2,738 kc s., 2,770 kc s., and 2,806 kc s.

All messages addressed to the Port Authorities and messages concerning pilotage must be handled at this radio station.

Masters are particularly required to give the radio station, as soon as they arrive, the following information:

Vessel's draft and net tonnage, amount of cargo for discharge, number of gangs required.

The telephone number of the radio station is 23235.
TUGS: The port has at present one small tug. At all times two wooden mooring launches, each 32 ft. long, are available for Pilot's use.
BERTHING: A finger pier is under construction for cruising liners.

The commercial quay is a construction of reinforced concrete supported by wooden piles, encased in concrete, with traverse wooden fendering.

The quay is orientated in an East–West direction and is constructed in three sections.

Quay No. 1 – South side – length 453 ft. with depth alongside of 12–17 ft.

Quay No. 2 – central sections – length 540 ft. with depths alongside 17–23 ft.

Quay No. 3 – Seaward section – length 640 ft. with depth alongside 23–28 ft.

There is an angular portion of 100 ft. between Quays No. 1 and 2 which may not be used for mooring, but which the bow of the ship may overhang. Vessels must be secured by at least two mooring cables at the bow and at the stern.

The Port Authorities require for vessels manoeuvring in the port a minimum of 2 ft. of water under the keel This regulation may be modified by special authorisation of the Chef de Port.

In addition to the public pier, there are five jetties belonging to private companies used for handling products in bulk. These jetties belong to the following companies:

A. La Hasco, sugar refinery established at Port-au-Prince.
B. La Minoterie, flour mill situated at Laffiteau.
C. Le Ciment d'Haiti SA, cement factory situated at Fonds Mombin.
D. Jean Ackmed, fuel installation situated at Simonette.

The above jetties are established on the North side of the bay.

E. Installations of Shell Company and Tropigas on the South side of the bay, equipped with their own mooring buoys for tankers.

CARGO HANDLING: For vessels loading and discharging at the public pier, cargo is transported on railway trucks of 25 tons maximum capacity.

One quay is equipped for container ships. One quay is equipped to handle roll-on/roll-off traffic.

STEVEDORES: Loading and discharging of ships is carried out by gangs of private workers who are engaged by the ship's Agents under the supervision of a chief stevedore. The working gangs use the ship's own equipment for loading and discharge.

Handling rates are normally about 15 tons per hour for general cargo, or about 25 tons per hour for heavy articles, such as drums, planks, bundles of steel rods, etc.

Normal working hours in the port are 0700 to 1200 and 1300 to 1600. Overtime is payable for work required before 0700 and after 1600 hours, and also for work required during Saturday afternoon, Sundays and holidays.

FRESH WATER: Drinking water is available in the port; however, the ship must provide its own connections. Rate of loading varies from 4 to 10 tons per hour.

FUEL: There is no service for coal bunkers. Fuel oil may be supplied by barge.

REPAIRS: There are no proper facilities for ship's repairs although minor repairs may be effected by small private workshops ashore. There is a small dry dock at Bizoton about 1 mile from the port, with a capacity of about 1,000 tons and able to receive vessels up to 175 ft. in length. This yard is managed by the Haitian Army Coast Guard.

MEDICAL: There are adequate medical facilities, pharmacies and hospitals.

AIRPORT: An international airport for jet planes connects Haiti with New York via Kingston, Montego Bay or San Juan. A local air service connects Port-au-Prince with principal towns of the Republic.

FIRE-FIGHTING EQUIPMENT: The Port Authority does not own any equipment for fire-fighting or assisting vessels in need. However, there is a town fire service organised by the Army.

There are no facilities for refuse collection, but nevertheless it is forbidden to throw refuse, cinders or any other polluting material overboard.

Launches used for the transport of tourists are available at Port-au-Prince and these are operated by private companies. The Port Authority does not take an active part in the traffic of tourist passengers. Those which disembark on the wharf from cargo vessels or cruising liners must make their way on foot to the taxi station to take part in excursion tours. However, the majority of tourists coming on passenger liners anchored in the roads disembark by launches belonging to the Department of Tourism. They disembark at the Quai Colomb, which is under the authority of the Department of Tourism.

APPROACHES: A. (Dry-cargo vessels): The approaches are reasonably free from hazards and are well marked by day or night. Vessels working at buoys with drafts up to 29 ft. are requested to enter port via the Western Entrance. Other vessels with drafts up to 36 ft. by Lei Yue Mun entrance.

B. (Tankers): The tankers which berth at the Esso Company installation at Tsing Yi, and at the Mobil installation, also at Tsing Yi enter the harbour, but with the exception of the approaches to the Esso Terminal which was specially dredged for the purposes of accommodating vessels at 42 ft. draft, there is no limitation on depth save that at the individual berth.

C. Buoyage. The system of buoyage used in Hong Kong harbour conforms to the uniform system of maritime buoyage adopted by the lighthouse authorities in Britain. The main stream of flood tide within the harbour limits is from East to West and buoyage is laid accordingly. Several terrestrial navigational beacons within the waters of Hong Kong are also painted to conform with the uniform system of maritime buoyage.

PILOTAGE: Although pilotage is not compulsory in the port, pilots licensed by the Pilotage Board are available to board ships at either entrance on request. The Hong Kong Pilotage Association, provide pilotage services. Pilots generally board in-bound ships using the Eastern entrance in the vicinity of the Lei Yue Mun turning buoy (latitude 22° 16.4′ North, longitude 114° 15.3′ East) and disembark at the same point from outwardbound ships. At the Western entrance, pilots embark and disembark to the West of Green Island. It is a contravention of regulation 3(1) of the Merchant Shipping (Control of Ports) Regulations, for any vessel to pick up or discharge a Pilot within a distance of 7·5 cables from the centre of either the Lei Yue Mun Pass or Sulphur Channel. Maximum speed inside harbour, 8 knots.

ANCHORAGES: Examination anchorages (quarantine and immigration) for clearance inwards are situated within the harbour limits to cover the entry of shipping from East and West. The main dangerous goods anchorage is located at the Western end of the harbour, while others are established next to the major oil installations.

An anchorage for the discharge of logs has been designated. This was necessary because logs, which were being discharged and stored within harbour limits were endangering small craft, waterside installations and navigation.

MAX. SIZE: Largest vessels calling regularly have been, dry-cargo: length 819 ft., draft 32 ft. 8 in.; tankers length 776 ft., draft 42 ft. Maximum size governed by draft of vessel. No limit as to length and beam. Draft in harbour: "A" class buoys 25 ft. to 44 ft. "B" Class buoys 18 ft. to 27 ft.

PRATIQUE: The following conditions must be fulfilled before radio pratique can be granted: The ship must not have called at an infected port within 14 days prior to arrival at Hong Kong. There must be not more than 24 passengers on board at the time of arrival, provided that a vessel carrying more than 24 passengers may, at the discretion of the Chief Port Health Officer, be granted radio pratique if there is a ship's doctor on board.

The master must furnish the following information to the Port Health Office not more than 20 hours and not less than eight hours before his expected time of arrival at Hong Kong:

1. ports of call during the 14 days prior to arrival;
2. number of passengers on board;

4. a statement indicating whether any case of infectious disease has occurred on board during the voyage;
5. whether any person on board is sick;
6. the date of issue of the deratting or deratting exemption certificates.

Note 1: Shipping companies or agents must send their applications for radio pratique in writing and, if granted, will be responsible for notifying the master concerned.

Note 2: Maritime declarations of health and passenger and crew lists must be collected by the shipping companies or agents and forwarded to the Port Health Office within 24 hours of the ship's arrival.

Note 3: Ships granted radio pratique will be required to display the following signal on arrival in the quarantine anchorage: Day: International code flag "TO". Night: Three white lights in a vertical line six feet apart.

Note 4: The Master of the ship concerned will be held responsible for the accuracy of the statements contained in his cablegram requesting radio pratique.

Port Health. The hours of duty of port health officers in the examination anchorages are similar to those of the Immigration Department. The Port Health launch exhibits the international code flag "Q" by day and a red light over a white light at night. The appropriate quarantine signal should be flown by a vessel until the Port Health Officer has completed his inspection.

IMMIGRATION: Immigration formalities take place at the Eastern or Western examination anchorages after clearance by the Port Health authorities. Immigration launches are on duty 24 hours a day in the Eastern anchorage and from *6 a.m.* to *7 p.m.* in the Western anchorage throughout the year.

RADIO: Cable Agent via Radio Hong Kong call sign "VPS".

Signal Stations. Four signal stations operated by the Marine Department are situated in the Eastern and Western approaches to, or within, the harbour limits as follows:

Eastern approaches: Waglan Island, (latitude 22° 11′ North, longitude 114° 18.1′ East). Western approaches: Green Island (latitude 22° 17.1′ North, longitude 114° 06.5′ East).

Marine Department Port Communications Centre, Lat. 22° 17.4′ North, Long. 114° 11.8′ East. North Point Signal Station, Lat. 22° 17.7′ North, Long. 114° 11.8′ East.

These stations are manned 24 hours a day throughout the year and contact can be made by means of international code flags or by signal lamp. In addition, the Marine Department Headquarters Signal Station can be contacted by VHF radio-telephone on Hague Plan Channel 12. Communication between the stations is provided by radio, land-line telephone and a teleprinter circuit.

It is mandatory for the Master of every ship arriving within signalling distance of any of the above signal stations to hoist the national colours and (if one shall exist) the house flag and the signal letters of the ship, and to identify the vessel to the signal station by visual signals if requested. On recognition of a ship in the approaches to Hong Kong, the name is immediately relayed to the Port Control Office of the Marine Department, and the ship's owners or agents can be notified on request.

Wireless Telegraphy: Radio communication apparatus on board a merchant vessel is not permitted to be used while the vessel is within Hong Kong territorial waters except in the following circumstances:

When a vessel is proceeding through Hong Kong territorial waters such apparatus may be used to communicate on minimum power with the nearest coast station or, if communication with the nearest coast station is impracticable and the safe navigation of the vessel so requires, with a more distant coast station or another vessel;

For the purpose of summoning assistance on an occasion of danger to the life of any person or to the vessel;

For the purpose of carrying out experimental tests for which permission in writing must first be obtained.

Broadcasting arrangements—Typhoon Warnings: After the hoisting of local storm signal No. 5 or above, Radio Hong Kong and Commercial Radio will extend their hours of operation and simultaneously broadcast typhoon warnings in English and Chinese at two minutes to the hour and half past the hour precisely, throughout the day and night. Warnings in English will be broadcast by an announcer at each station; warnings in Chinese will be broadcast by a Chinese announcer from the Radio Hong Kong booth at the Royal Observatory. On certain occasions these arrangements will come into force, should local storm signal No. 3 remain hoisted at the time when the radio stations normally close. The foregoing arrangements continue until the signal drops below No. 5 once again.

Frequencies: Radio Hong Kong (English Service) 545 Khz., 91 Khz.; (Chinese Service) 640 Khz., 94 Khz. Commercial Radio (English Service) 1530 Khz., 196 Khz.; (Chinese Service No. 1) 1050 Khz.; 1170 Khz.

VHF: Control Station, Hong Kong Port Radio call sign "Mardep" Channel 12. 24 hours listening watch. Range up to 35 miles.

Maritime VHF Radio-telephone Service (Hague Plan): This service operates in Hong Kong on two international channels, Nos. 16 and 26. Channel 16 (156.8 mc/s) is the simplex distress and calling frequency on which contact is made between shore and ship before changing over to the public correspondence channel, No. 26. The latter is a duplex channel and Hong Kong transmits on 161.9 Mc/s and receives from ships on 157.3 Mc/s.

Local connection to the service is *via* the Hong Kong Telephone Company and is made in the same way as for overseas radio-telephone calls by dialling "100". The local operator should then be informed that a telephone call is required on "the Maritime VHF Hague Plan Service". The operator will ask for details of the call, such as the name of the ship and the person required, and will then connect the call *via* Cable & Wireless. Calls can also be sent from ship to shore. The range is about 50 miles and the service is available at all times of the day and night.

Harbour phones: Cable & Wireless Ltd., on behalf of the Hong Kong Telephone Company, will install and maintain VHF radio-telephones on ships at buoys in the harbour for the duration of a ship's stay in port. Calls may be made between any two ships so equipped, and between a ship and any telephone number on the Hong Kong or Kowloon exchanges.

TUGS: Available for berthing and unberthing. Advance booking is required. See Table B.

BERTHING: Berthing of dry-cargo vessels alongside wharf can be performed any time during day and night. Berthing at tanker wharf not permissible after sunset. Ships carrying explosives must obtain permission from the Marine Department before berthing is allotted.

Berthing signals will be exhibited on the signal station on top of the Kowloon Star Ferry pier. Code flag Y by day and one green light over red light at night indicates anchor and await instructions. Crossed bamboo poles on which are displaced code flags N and B, when sited at the end of a pier denotes that the vessel is required to berth stern to the praya wall.

Boatmen. Labour to handle ships' mooring lines when berthing and unberthing at any of the wharves in Hong Kong waters is supplied by the owners of the wharf concerned, the cost being included in the berthing fee. For berthing at a Marine Department mooring buoy it is usual for the ship's agent to arrange for boatmen to handle the ship's slip wire and anchor cable, unless the ship's crew undertake this task. The services of boatmen are generally obtained through the Hong Kong Pilotage Association. For night berthing two boats are normally required—one to handle the wire and cable and the other to provide a lighted marker for the mooring buoy.

Mooring Buoys. See "Max-size." All ships are required to secure to Marine Department mooring buoys by their chain cable. The maximum length of a ship permitted to berth at an "A" class mooring is 600 ft., the swing circle encompassing each buoy having a radius of 700 ft. The maximum length of a ship permitted to berth at a "B" class mooring is 450 ft., the radius of swing circle around such buoys being 550 ft. It is therefore within the limits of safety for a vessel, when secured to a Marine Department mooring, to slack out to "one shackle on the windlass" and still clear ships berthed at adjacent buoys, except in exceptional circumstances. As all Marine Department moorings are of the one-legged type, it is permissible, should circumstances make it necessary, for a ship, when attempting to secure to a mooring, to drop an anchor at not less than 50 feet from the buoy without fouling the mooring chain. It should be noted, however, that moorings sited within the man-of-war anchorage and the Hongkong and Whampoa Dock Company's private mooring H.W.D. No. 1 in Hung Hom Bay are either of the two or three-legged type, and it is therefore not permissible to use an anchor when berthing.

44 "A" class mooring buoys and 29 "B" class mooring buoys for ocean going vessels. Additionally two "B" class mooring buoys available at Yam O Bay, Lantan Island, for vessels with cargoes of logs.

STEVEDORES: The following table shows the average handling rates per gang hour:

Stevedores work 24 hours per day except Mid-Autumn Festival and Chinese New Year Holidays.

TANKERS: Any leaking of oil to water will be subjected to heavy fines. If not gas-freed, not allowed through harbour. Maximum draft for berthing 42 ft. See Table A.

DENSITY: 1017.

FRESH WATER: Available but the supply is sometimes limited, depending on the storage levels in Hong Kong's reservoirs. The supply to ships is made at commercial wharves and from water boats. See Table C.

FUEL: Excellent facilities exist for bunkering vessels with fuel oil and coal. Fuel oil can be obtained either at the wharves adjacent to the oil installation, or from harbour oilers owned and operated by the oil companies. Fuel oil from these vessels can be pumped on board without impeding cargo operations. Adequate stocks of good quality bunker coal suitable for coal-fired marine boilers are maintained in the port. Fuel oil available with viscosity up to 1,000 sec. Redwood. 24 hours notice for supply is required. Also gas oil and marine diesel available. See Table D.

FIRE PRECAUTIONS: The Fire Services Department operates fire floats. One of these, the "Alexander Grantham" is one of the largest and most powerful in the world, being equipped with machinery capable of pumping 10,500 gallons a minute at a pressure of 90 lb. per square inch through a battery of monitors. This vessel is equipped to deal with any type of fire on any size vessel, and is designed to operate both in the port and at sea.

PILOTAGE: Telegraphic address of Pilot Station: VWST. 48 hours advance notice of ETA, giving deepest freshwater draft. Pilot boards vessel Sandheads from pilot vessel fitted with W/T, DF, gear, radar, echo sounder and other navigational equipment, maintains continuous watch on 500 kc/s. (600 metres) and receive ETA messages of incoming vessels.

As an aid to navigation, navigable channel in river is marked with lights and channel buoys. There is a lighthouse at Saugor and downstream from this point, 3 attended Light Vessels are stationed at the Western Channel and 2 unattended Light Vessels at Gabtola and Lower Long Sand at Sandheads. Navigable channel leading to port from sea is about 126 miles long. 14 bars are in different reaches of river, 11 of these are upstream of Diamond Harbour and remaining 3 in estuary below Diamond Harbour. Since these bars are subject to fluctuations and there are sharp bends in river, the navigation of ships between port and Sea requires services of trained Pilots employed by Port Commissioners. River Pilots take charge of vessels at Sandheads, navigate to Garden Reach and then make over to harbour Pilots who manoeuvre vessels to riverside jetties, moorings or dock berths. Movement of ships inside docks guided by Berthing Masters.

ANCHORAGES: Anchorage in River Hooghly at Saugor Roads, Haldia, Kalpi, Diamond Harbour, Royapur, Ulubaria and Garden Reach of which Royapur, Ulubaria and Garden Reach utilised only by ships on passage to and from the port in emergency. Depths of anchorages vary on day to day basis according to River Draft Forecast but on average 30 ft. deep.

RESTRICTIONS: Navigation on River Hooghly is carried out only with Pilot on board and according to tide. Speed of vessel important factor and must be declared to Pilot on board, preferably telegraphed 48 hours in advance to Pilot vessel.

MAX. SIZE: Maximum LOA 530 ft. with beam of 70 ft. for King George's Docks and 515 ft. LOA with beam of 66 ft. 6 in. for Kidderpore Docks. Maximum LOA of tankers for tanker terminal at Budge Budge is 600 ft. No restriction of beam for vessels berthed in Budge Budge only, as no lock entrance. Deepest draft alongside dock berths in King George's and Kidderpore Docks 30 ft. At Budge Budge deepest draft at any berth also 30 ft. Berthing of vessels, depends on prevailing draft of day published in Draft Forecast for month.

PRATIQUE: Procedure for obtaining pratique: To obtain Radio Pratique incoming vessels communicate by wireless to Port Health Officer, Calcutta, Cable address: "Quarantine Calcutta":

(*a*) No sickness or death from sickness on board within last 15 days.
(*b*) No sand, earth, pig, poultry, crew or passenger taken aboard from E. Coast of Africa between Port Sudan and Durban, both ports included.
(*c*) Ship not touched within last 30 days any port in E. Africa between Northernmost point of Eritrea and Southernmost point of Tanganyika, including Island of Zanzibar or any other yellow fever infected area.
(*d*) Nor abnormal mortality of rats or mice on board.
(*e*) No monkey on board.

(Item (*a*) to be sent in code under usual standard quarantine messages required by ships; rest in plain language through local wireless station.)

In case of any suspected disease or fever on board, local agents may be contacted by cable who arrange for doctor to be sent or for removal of a patient if necessary. Vessels calling at another port in same country are exempted from obtaining pratique.

Vessels at river jetties and river moorings if left during Bore Tide are to comply with following:

Half an hour before low water:
(*a*) Gangway to be hoisted up.
(*b*) Pipelines disconnected and triced up (for vessels at Budge Budge Jetty).
(*c*) Heave tight on forward chains to keep vessel about 6 ft. off pontoon. Make sure weight is on bore springs and not on chains aft.
(*d*) Tighten all buoy ropes.
(*e*) When bores expected, all vessels in stream shall have steam on main engines, windlasses and winches and a sufficient number of officers and crew on board to tend vessel in case of emergency.

After bore made, and vessel stopped ranging, slack forward chains to old mark. Bore springs could be had through Agents from local suppliers.

Budge Budge (oil terminal) on banks of River Hooghly has river jetties, hence above instructions also apply to vessels berthed at Budge Budge Jetties.
